15. Supplementary Notes					
16. Abstract  A frontal load cell barrier test of a 1991 Plymouth Acclaim 4-Door Sedan was performed at Calspan Advanced Technology Center crash test facility in Buffalo, New York on May 21, 1991.  The impact speed was 35.0 mph and the ambient temperature at the barrier face at the time of impact was 75°F. The maximum post-test vehicle crush was 23.9 inches. The test vehicle was equipped with a 3-point continuous belt restraint system at each of the front outboard seating positions. The test vehicle was also equipped with a driver side airbag as a supplemental restraint device.  With regard to FMVSS 208 "Occupant Crash Protection," injury criteria, both the driver and passenger dummies appear to comply with the maximum head, chest and femur requirement.

Section 1  
PURPOSE AND TEST PROCEDURE

This 35 mph frontal barrier impact test is part of the Composite FY 90 Vehicle Barrier Impact Testing Program sponsored by the National Highway Traffic Safety Administration (NHTSA) under Contract No. DTNH22-90-D-02121. The purpose of this test was to obtain vehicle crashworthiness and occupant restraint system performance data for an impact speed in excess of the current 30 mph requirements.

The 35 mph frontal barrier impact test was conducted in accordance with the Office of Market Incentives (OMI) Laboratory Indicant Test procedure.

## Section 2

### SUMMARY OF TEST NUMBER MMO304

A load cell barrier consisting of 36 load cells was impacted by a 1991 Plymouth Acclaim 4-Door Sedan at a velocity of 35.0 mph. The test was performed at the Calspan Corporation Advanced Technology center on May 21, 1991. Pre- and post-test photographs of the vehicle and dummies can be found in Appendix A.

The frontal barrier impact event was documented by one real-time camera and 15 high-speed cameras. Camera locations and other pertinent camera information can be found in this report.

Two Part 572E, 50th percentile male anthropomorphic test devices (ATDs), were placed in the driver and right-front passenger seating positions according to dummy placement instructions specified in the Laboratory Indicant Test Procedure.

Both ATDs were fully instrumented with head and chest triaxial accelerometers and right/left femur load cells. Seat belt load cells were also on the driver's and passenger's lap and shoulder belts to measure dummy torso and pelvic section loading. The driver ATD (Serial No. 150) was used in a previous test (MMO107). Injury criteria values were not exceeded in that test. The right front passenger ATD (Serial No. 245) was calibrated previous to this test. Certification details, along with instrumentation calibration data, can be found in Appendices C and D.

The 83 channels of data were recorded on six 14-channel FM tape recorders. Appendix B contains the vehicle, load cell barrier and dummy response data traces. Accelerometer #4(X), located on the bottom of engine block, was separated from the engine block during impact, therefore, the accelerometer did not record accurately during test. In addition, accelerometer #6(X), (located on the left disc brake caliper) did not record accurately during test. The velocity and displacement data traces have been removed from this report for both accelerometers. Position 2 Belt Spool Out and Position 2 Neck Force Z failed to record during test. Consequently, Position 2 Neck Force Resultant data trace was removed from report. Position 1 Neck Forces and Neck Moments contained a noise disturbance at approximately 74 milliseconds. The reason for this disturbance is unknown. Position 1 Neck Moment Z contained intermittent data after 145 milliseconds.

The driver's HIC was 761.5. The maximum chest deceleration over 3 milliseconds was 54.6 g's and femur loads were 1044.4 and 890.9 pounds.

The right front passenger's HIC was 445.8 and maximum chest deceleration over 3 milliseconds was 42.8 g's. Femur loads were 252.1 and 1116.7 pounds.

Table 1

GENERAL TEST AND VEHICLE PARAMETER DATA

Vehicle Year/Make/Model/Body Style: 1991 Plymouth Acclaim 4-Door Sedan

NHTSA No.: MMO304 VIN.: 1P3XA46K1MF515457

Body Color: White Date Of Manufacture: August 1990

Engine: 4 Cylinders; - C.I.D.; 2.5 Liters; - CC  
X Gas; - Diesel; - Turbocharged  
- Longitudinal; X Transverse

Transmission: - Speed; - Manual; X Automatic; - Overdrive

Final Drive: X Front Wheel; - Rear Wheel; - Four Wheel

Date Received: 5-13-91 Odometer Reading: 32 miles

- A/C; X P/S; X P/B; - P/wdo.; - Tilt Wheel  
- P/seats; - Cruise Control

Type of Occupant Restraint: 3-point continuous belt restraint with a driver side  
airbag

DATA RECORDED FROM VEHICLE'S TIRE PLACARD:

Tire Pressure (at capacity): Front 32 psi, Rear 35 psi

Recommended Tire Size: P185/70R14

Recommended Cold Tire Pressure: Front 32 psi, Rear 35 psi

Tires on Vehicle: P185/70R14; Manufacturer: Goodyear

Number of Occupants: 2 Front; 3 Rear; - 3rd Seat; 5 TOTAL

Type of Front Seats: X Bucket; - Bench; - Split Bench

Type of Front Seat Back: - Fixed X Adj. With X Lever - Rot. Knob

Vehicle Capacity Weight (VCW) = 865 lbs. (A)

No. of Occupants x 150 lbs. = 750 lbs. (B)

Rated Cargo and Luggage

Weight (RCLW) A-B = 115 lbs.

GVWR 4025 lbs. GAWR: Front 2177 lbs. Rear 1898 lbs.

Table 1

GENERAL TEST AND VEHICLE PARAMETER DATA (cont'd)

WEIGHT OF TEST VEHICLE AS RECEIVED FROM DEALER (WITH MAXIMUM FLUIDS) = UDW:

Right Front = 840 lbs.                      Right Rear = 540 lbs.  
Left Front = 960 lbs.                      Left Rear = 520 lbs.  
TOTAL FRONT WEIGHT = 1800 lbs.      (62.9 % of Total Vehicle Weight)  
TOTAL REAR WEIGHT = 1060 lbs.      (37.1 % of Total Vehicle Weight)  
TOTAL DELIVERY WEIGHT = 2860 lbs.

CALCULATION FOR TARGET TEST WEIGHT:

UDW = Unloaded Delivered Weight    (2860 lbs.)  
VCW = Vehicle Capacity Weight      (865 lbs.)  
DSC = Designated Seating Capacity (5 )  
RCLW = VCW - 150 (DSC) = 115 lbs.  
Target Test Weight = UDW + RCLW + (2 dummies x 167 lbs./dummy)  
Target Test Weight = 3309 lbs.

WEIGHT OF TEST VEHICLE WITH REQUIRED DUMMIES AND 106 POUNDS CARGO:

Right Front = 930 lbs.                      Right Rear = 700 lbs.  
Left Front = 980 lbs.                      Left Rear = 690 lbs.  
TOTAL FRONT WEIGHT = 1910 lbs.      (57.9 % of Total Vehicle Weight)  
TOTAL REAR WEIGHT = 1390 lbs.      (42.1 % of Total Vehicle Weight)  
TOTAL TEST WEIGHT = 3300 lbs.  
Weight of ballast secured in vehicle trunk area = 0 lbs.

VEHICLE ATTITUDE (all dimensions in inches):

Delivered Attitude:    RF 27.0    LF 26.8    RR 27.5    LR 27.2  
Test Attitude:            RF 26.5    LF 26.3    RR 25.5    LR 24.9  
Wheel Base:      103.6 in.;    C.G. = 43.6 in. rearward of front wheel C/L  
Remarks: 14.9 gallons of stoddard solution was placed in the fuel tank.

---

Table 1

GENERAL TEST AND VEHICLE PARAMETER DATA (cont'd)

POST-IMPACT DATA:

Type of Test: Frontal Barrier Impact Angle: 0°  
 Date of Test: May 21, 1991 Time of Test: 12:15  
 Ambient Temperature: 75 °F at impact area  
 Temperature in Occupant Compartment: 72 °F  
 Windshield Molding Temperature: 72 °F  
 Required Impact Velocity Range: 34.5 to 35.5 mph  
 Impact Velocity: primary = 35.0 mph, secondary = 35.0 mph  
 Distance From Front Bumper to Barrier Face When  
     Entering Speed Trap: 52 inches  
     Exiting Speed Trap: 12 inches

VEHICLE REBOUND AND CRUSH (inches):

Vehicle Length:	Pre-test	= R	<u>175.7</u>	C <sub>L</sub>	<u>180.4</u>	L	<u>175.5</u>
	Post-test	= R	<u>156.5</u>	C <sub>L</sub>	<u>156.5</u>	L	<u>154.2</u>
	Crush	= R	<u>19.2</u>	C <sub>L</sub>	<u>23.9</u>	L	<u>21.3</u>

Distance from front of test vehicle to point of impact:

R 19.3 C<sub>L</sub> 19.6 L 23.5

VISIBLE DUMMY CONTACT POINTS:

	<u>Driver</u>	<u>Passenger</u>
Head	<u>Air Bag</u>	<u>Top of Head Had Slight Contact with Dashpanel</u>

Section 3  
OMI FINAL DATA

Occupant and Vehicle Information

I. OMI DATA

1. Dummy Injury Criteria Data Summary
2. Dummy Positioning Data
3. Seat Belt Positioning Data
4. Seat Belt Performance Assessment Data
5. Driver Dummy to Steering Column Dimensions
6. Camera Locations
7. Vehicle Target Locations

II. OVR DATA

1. Load Cell Barrier Data
2. Vehicle Accelerometer Data
3. Test Vehicle Measurements

Table 2  
DUMMY INJURY CRITERIA VALUES

NHTSA No.: MM0304 Vehicle: 1991 Plymouth Acclaim 4-Door Sedan

	MAXIMUM HEAD ACCELERATION (g's)			
	X	Y	Z	R
Position #1 - Driver	-79.8	-19.8	32.2	85.2
Position #2 - Passenger	-51.8	8.9	38.5	59.9

	MAXIMUM CHEST ACCELERATION (g's)			
	X	Y	Z	R
Position #1 - Driver	-55.9	-8.3	15.9	54.6
Position #2 - Passenger	-44.0	-13.8	9.9	42.8

The maximum chest resultant acceleration is defined as the maximum acceleration which exceeds 0.003 seconds in duration.

	MAXIMUM FORCE - FEMUR LOAD (lbs.)	
	LEFT FEMUR	RIGHT FEMUR
Position #1 - Driver	1044.4	890.9
Position #2 - Passenger	252.1	1116.7

	MAXIMUM FORCE - SEAT BELT LOADS (lbs.)		
	SHOULDER STRAP UPPER BELT LOAD	LAP STRAP RIGHT BELT LOAD	LAP STRAP LEFT BELT LOAD
Position #1 - Driver	1229.0	-	1231.0
Position #2 - Passenger	1680.8	1182.0	-

	HEAD INJURY CRITERIA (HIC)			
	HIC	t <sub>1</sub> (SEC)	t <sub>2</sub> (SEC)	Average Acceleration t <sub>1</sub> TO t <sub>2</sub>
Position #1 - Driver	761.5	.05424	.07740	64.1
Position #2 - Passenger	445.8	.07932	.11520	43.4

HIC is as defined in FMVSS 208. The maximum time interval from t<sub>1</sub> to t<sub>2</sub> is 36 milliseconds.

Table 3  
HYBRID III NECK AND CHEST DATA SHEET

Vehicle Year/Make/Model/Body Style: 1991 Plymouth Acclaim 4-Door Sedan

Vehicle NHTSA No.: MM0304 Test Date: May 21, 1991

MAXIMUM VALUES	DRIVER DUMMY ID # <u>150</u>	PASSENGER DUMMY ID # <u>245</u>
Neck Load X	-150*	297.8
Neck Load Y	-265*	281.6
Neck Load Z	1050*	**
Neck Moment X	125*	253.3
Neck Moment Y	450*	327.2
Neck Moment Z	650*	122.7
Chest Deflection X (in.)	1.8	1.4
Time of Max. Occurance	66.7 msec	88.4 msec

NOTE: All values listed must be occurring during primary impact event.

\*The maximum values that are shown are only approximations, thus neglecting the noise disturbance at 74 msec.

\*\*Pos. 2 Neck Load Z failed to record during test.

Appendix C

PART 572E DUMMY CONFIGURATION

AND PERFORMANCE VERIFICATION DATA SHEETS

Appendix C contains the results from certification tests performed on the 50th percentile male anthropomorphic test devices utilized for this crash test. The results indicate that the dummies meet all of the performance requirements of the six standard tests as specified in 49 CFR Part 572, Federal Register, Volume 42, No. 25, dated February 7, 1977.

The tests were conducted at the Dummy Certification Test Facility of Calspan Corporation, Advanced Technology Center. A summary of the test results, and Part 572 specifications are included in this Appendix.

Dummy serial numbers and certification dates are:

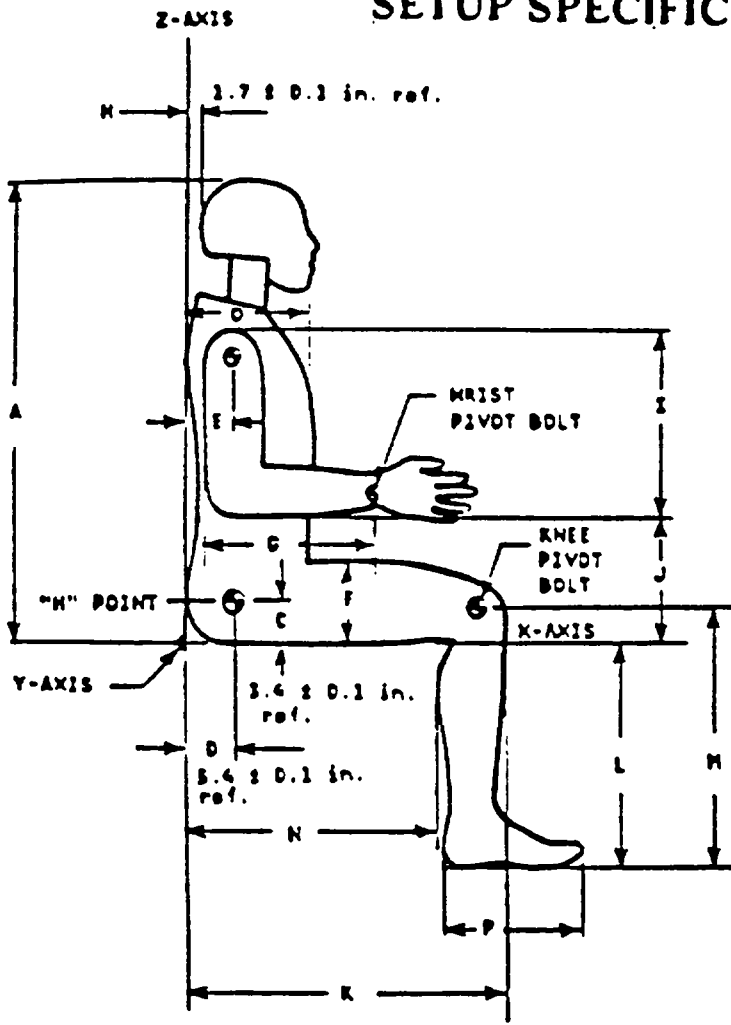

<u>Serial No.</u>	<u>Completion Date</u>
150	3-25-91
245	4-18-91

Electronic Test Equipment

The complement of signal conditioning, recording and display equipment, in conjunction with dummy certification testing, can be found in New Car Assessment and Standards Indicant Testing Final Report No. 6525-V-1.

VEHICLE OWNER'S MANUAL OCCUPANT RESTRAINT SYSTEM INSTRUCTIONS

## OCCUPANT RESTRAINTS

### Seat Belts

Always use the seat belts. The chance of a serious injury is greatly reduced when the belts are properly used.

Seat belts provide protection against being thrown from the vehicle as well as reducing the risk of an injury caused by striking the interior of the vehicle.

### Unibelts

The "UNIBELT", or single continuous-belt restraint system, incorporates an inertia sensitive belt webbing retractor which is designed to lock (i.e., prevent belt travel) *only during very sudden stops or impacts*. This feature allows the shoulder belt to move freely with the wearer under normal conditions. *The retractor will not lock by jerking or pulling the webbing rapidly by hand.*

### UNIBELT OPERATING INSTRUCTIONS

1

1. Enter the vehicle and close the door. Sit back and erect and adjust the seat. Note the latch plate of the unbelt in its stowed position.

2

2. Grasp the latch plate and slide it up the webbing as far as necessary to go around your lap as you pull out the webbing.

3

**3.** As you pull the webbing across your lap and over your shoulder, move the latch plate toward the buckle.

Insert the latch plate into the buckle until a "click" is heard.

Do not wear the shoulder belt under your arm or otherwise out of position. Such use could increase the chance and/or severity of injury in a collision.

4

**4.** Position the lap belt with the upper edge of the belt drawn across the thighs and snug against the hips. Slack will automatically be removed due to tension created by the retractor. If a snug fit in the lap belt portion is desired, pull up on the shoulder belt as shown. *A snug belt reduces the risk of sliding under the belt in a collision.*

5

**5.** Position the shoulder belt on your chest so that it is comfortable and not resting on your neck. Any slack in the belt will be withdrawn automatically by the retractor.

6

**6.** To release the belt, push the button. The belt will automatically retract to its stowed position when the door is opened.

If needed, slide the latch plate down the webbing to allow the belt to fully retract.

**DRIVER SUPPLEMENTAL RESTRAINT SYSTEM -  
AIRBAG (If so equipped)**

This vehicle is equipped with a supplemental airbag restraint system for the driver. The seat belt continues to be the primary restraint and should be worn whenever the vehicle is in motion. It is important to wear the seat belt because it helps to provide protection in collisions for which the airbag is not designed to deploy, either because of low impact speed or non-frontal direction of impact (such as lateral, rollover or rear impacts). The seat belt also helps to position the driver for higher-speed frontal collisions in which the airbag does deploy. The steering wheel mounted airbag, lower instrument panel knee bolster and seat belt work together as a system to provide protection for the driver.

Service and general information labels about the airbag system can be found on the driver's sun visor, glove box door and in the engine compartment. Instructions on how to properly dispose of deployed airbags or airbag equipped vehicles can be obtained from your Chrysler Motors dealer.

The supplemental restraint system consists of the following items:

- impact sensors
- system diagnostic unit
- "AIRBAG" readiness lamp
- airbag module/inflator unit
- unique steering column and wheel
- interconnecting wiring
- instrument panel knee bolster

When the impact sensors located in the front of the car and in the passenger compartment detect a front end collision warranting airbag deployment, their internal

switches complete an electrical circuit that actuates the inflator unit in the airbag module. This starts the process of generating a large quantity of non-toxic nitrogen gas which inflates the airbag. As the airbag inflates from its folded, stored position behind the steering wheel hub trim cover, the trim cover separates along seams and folds back out of the way to allow the airbag to inflate to its full size. The airbag fully inflates in about 50 milliseconds, about half the time it takes to blink your eye. It then begins to deflate by venting the non-toxic nitrogen gas through holes in the rear of the airbag so it will not interfere with controlling the car, and within a short amount of time, the airbag is almost entirely deflated.

#### **Should A Deployment Occur**

The airbag system is designed to deploy when the impact sensors detect a moderate to severe frontal collision, and then immediately deflate.

**NOTE:** *A frontal collision that does not warrant airbag protection will not activate the system. This does not indicate something is wrong with the airbag system.*

Should you experience a frontal collision which deploys the airbag, any or all of the following events may occur.

The nylon airbag material may under certain conditions cause abrasions and/or skin reddening to the driver as the airbag deploys and unfolds itself from its stored position. The abrasions are similar in nature to friction type rope burns or those experienced by sliding along a carpet or gymnasium floor. They are not caused by contact with chemicals, are not permanent and normally heal quickly. However, if significant healing has not occurred within a few days, or in the unlikely event that blistering occurs, seek the immediate advice of a personal physician.

As the airbag deflates from its fully inflated condition, some degree of smoke-like particles may be ob-

served. The particles are a normal by-product of the process which generates the non-toxic nitrogen gas used for airbag inflation. These airborne particles may cause irritation of the skin, eyes, nose, or throat. Should skin or eye irritation occur, rinse the area with cool water. For nose or throat irritation, move to fresh air. If irritation continues, seek the advice of a personal physician.

Within a few seconds, the particles will begin to settle out and dissipate. As they do, the residue will settle on the interior surfaces of the vehicle. Avoid prolonged contact with this residue as it could irritate the skin and/or eyes. Should any irritation occur, rinse the skin or eyes with cool water. If the irritation continues, seek the advice of a personal physician. Should the residue come in contact with clothing, follow the garment manufacturer's instructions for cleaning.

If the vehicle is safely driveable following the airbag deployment, the deployed airbag can be tucked back inside the opening in the steering wheel hub trim cover to make driving the vehicle somewhat easier. The airbag once deployed, will not re-deploy to provide occupant protection in a subsequent collision, and should be replaced by an authorized dealer as soon as possible.

#### **Readiness Indicator**

The diagnostic unit monitors the electrical portions of the airbag system components listed above, continuously whenever the ignition switch is in the "start" or "run" position. When the ignition switch is first turned on, the diagnostic unit will light the "AIRBAG" lamp in the instrument cluster for a period of 6 to 8 seconds and then turn the lamp off. This indicates the airbag system is ready to deploy for your protection in the event of an impact.

**NOTE:** *Should the "AIRBAG" lamp not come on at all, remain lit or light either momentarily or continuously while driving, a malfunction in one or more of the monitored components may have occurred and prompt service is required.*

### **Important Maintenance**

To assure that the airbag will be ready to deploy in a collision, have the system serviced promptly by an authorized dealer if any of the following indications of a possible system malfunction occurs:

- the "AIRBAG" lamp does not light for 6 to 8 seconds when the ignition switch is first turned on;
- the "AIRBAG" lamp remains lit after the ignition switch is first turned on;
- the "AIRBAG" lamp flickers during the 6 to 8 second period when the ignition switch is first turned on;
- the "AIRBAG" lamp flickers or lights and remains lit while operating the vehicle.

**WARNING!** Failure to have the airbag system properly serviced by an authorized dealer should one of the above conditions exist may lead to possible injury in the event of an accident.

Aside from the maintenance required in response to the above "AIRBAG" lamp conditions, an inspection of the mechanical and electrical components of the system is included in the regular maintenance service recommended for every 3 years or 30,000 miles. (See SECTION 4 - MAINTENANCE.)

### **System Precautions**

**WARNING!** Modification to the airbag system components or wiring, including the addition of any kind of badges or

stickers to the steering wheel hub trim cover or modifications to the front bumper or vehicle body structure, can adversely affect system performance and lead to possible injury.

Make sure the fuse access panel, located in the left lower portion of the knee bolster is in place before driving the vehicle, and do not mount or locate any aftermarket equipment on or behind the knee bolster. This is important to provide proper knee impact protection in the event of a collision.

Do not attempt to repair any component of the airbag system yourself. You can be injured if you are too close to the steering wheel hub and the air bag inflates. Be sure to tell anyone who works on your vehicle that it is equipped with an airbag.

**Front Center and Rear Center Lap Belts (if so equipped)**

The lap belts should be worn with the upper edge of the belt drawn across the thighs and snug against the hips. To reduce the risk of sliding under the belt in a collision, it should be adjusted as tight as comfort will allow, while sitting back and erect in the seat.

The center front and center rear seat belts are lengthened by tilting the latch plate relative to the webbing and pulling. To shorten the belt, pull the loose end of the webbing.

*Never use the same lap belt on more than one person at a time.*

**Use of Seat Belts During Pregnancy**

Chrysler Motors recommends that pregnant women use the available seat belts. This will reduce the possibility of
