SECTION 1
PURPOSE AND TEST PROCEDURE

PURPOSE

This 30 mph flat frontal barrier impact test is part of the Federal Motor Vehicle Safety Standard (FMVSS) 208, 212, 219 (partial), and 301 compliance test program conducted for the National Highway Traffic Safety Administration (NHTSA) by the MGA Research Corporation (MGA) under Contract No. DTNH22-93-D-21089. The purpose of this test was to determine whether the subject vehicle, a 1995 Mitsubishi Eclipse 3 Door, NHTSA No. CS5600, meets the performance requirements of FMVSS 208, "Occupant Crash Protection"; FMVSS 212, "Windshield Mounting"; FMVSS 219 (partial), "Windshield Zone Intrusion"; and FMVSS 301, "Fuel System Integrity," in the flat frontal barrier impact mode.

TEST PROCEDURE

This test was conducted in accordance with NHTSA's Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure No. TP-208-09 dated March 15, 1993. Data was obtained relative to FMVSS 208, "Occupant Crash Protection"; FMVSS 212, "Windshield Mounting"; FMVSS 219 (partial), "Windshield Zone Intrusion"; and FMVSS 301, "Fuel System Integrity," performance.

The test vehicle was instrumented with seven (7) accelerometers to measure longitudinal axis accelerations and one (1) accelerometer to measure vertical axis acceleration. The vehicle's specified impact velocity range was 28.9 to 29.9 mph. The vehicle impacted a fixed flat barrier of which face was covered with a sheet of 3/4 inch thick plywood.

The test vehicle contained two (2) Part 572 E 50th percentile adult male anthropomorphic test devices (dummies). The dummies were positioned in the front outboard designated seating positions according to the dummy placement procedures specified in Appendix C of the Laboratory Test Procedure.

Both dummies were instrumented with head and chest accelerometers to measure longitudinal, lateral, and vertical accelerations, and with left and right femur load cells to measure axial forces. Each Part 572 E dummy's instrumentation also included a chest potentiometer to measure longitudinal deflection.

The twenty-six (26) data channels were multiplexed and recorded on four IBM PC compatible computers with Metrobyte DAS-16F A/D converter boards. The data was digitally sampled at 8170 samples per second and processed per Section 11.13 through 11.15 of the Laboratory Test Procedure.

The crash event was recorded by one (1) real-time panning motion picture camera and fourteen (14) high-speed motion picture cameras. The pre-test and post-test conditions were recorded by the real-time motion picture camera.

The vehicle and occupant data are summarized in Section 2. The FMVSS 208, 212, 219 (partial) and 301 data are presented in Section 3. The vehicle, occupant, and camera measurements are presented in Section 4. Appendix A contains the still photographic prints. Appendix B contains the dummy and vehicle data plots. Appendix C contains the manufacturer's vehicle information.

SECTION 2
SUMMARY OF FRONTAL BARRIER IMPACT TEST

TEST RESULTS SUMMARY

This flat frontal barrier test was conducted at MGA Research Corporation on September 6, 1994.

The test vehicle, a 1995 Mitsubishi Eclipse 3 Door, NHTSA No. CS56ØØ, appeared to comply with the performance requirements of FMVSS 2Ø8, 212, 219 (partial), and 3Ø1 in the flat frontal barrier impact mode. The Head Injury Criteria (HIC) calculations were less than 1ØØØ, the chest resultant accelerations did not exceed 6Ø g's, and the compressive forces transmitted through the upper legs did not exceed 2,25Ø pounds as measured by Part 572 E dummies seated in the front outboard designated seating positions. For each Part 572 E dummy, the chest deflection did not exceed 3.Ø inches. The vehicle's restraint system met the applicable comfort and convenience requirements. The windshield periphery retention on each side of the vehicle centerline was greater than 5Ø percent. There was no penetration into any portion of the windshield. No fluid spilled from the vehicle's fuel system following the impact or during the static rollover test.

The test vehicle was equipped with an airbag and a Type 2 seat belt in the front outboard designated seating positions. Both dummies were restrained only by the airbag during the test. The vehicle's test weight was 3Ø5Ø pounds. The vehicle's impact speed was 29.4 mph. The vehicle's maximum static crush was 17.5 inches.

The driver's HIC was 155. The driver's chest maximum resultant acceleration with three (3) milliseconds minimum duration was 35.7 g's. The driver's chest maximum deflection was Ø.9 inches. The driver's left and right femur maximum compressive forces were 954 pounds and 1Ø16 pounds, respectively.

The right front passenger's HIC was 252. The right front passenger's chest maximum resultant acceleration with three (3) milliseconds minimum duration was 3Ø.4 g's. The right front passenger's chest maximum deflection was Ø.7 inches. The right front passenger's left and right femur maximum compressive forces were 12Ø9 pounds and 11Ø9 pounds, respectively.

There was no loss of windshield periphery retention and no penetration through the windshield.

Following the impact, no fluid spilled from the vehicle's fuel system prior to the static rollover test or during any portion of the static rollover test.

TEST NOTES

The bottom of engine X-axis accelerometer lost data after 46 milliseconds as a result of the accelerometer's cable being cut by the vehicle's crush on impact.

DRIVER DUMMY

Upon impact, the driver dummy translated forward on the seat impacting both knees into the instrument panel. The dummy's head and chest impacted the airbag with the dummy's head rotating rearward. The driver dummy was restrained by the airbag. The dummy rebounded rearward into the seat back with the dummy's head contacting the head restraint. The driver dummy came to rest in the seat.

RIGHT FRONT PASSENGER DUMMY

Upon impact, the right front passenger dummy translated forward on the seat impacting both knees into the instrument panel. The dummy's head and chest impacted the airbag with the dummy's head rotating rearward. The right front passenger dummy was restrained by the airbag. The dummy rebounded rearward into the seat back with the dummy's head contacting the head restraint. The right front passenger dummy came to rest in the seat.

Automatic seat belts installed in any vehicle, other than a walk-in van-type vehicle which has a gross vehicle weight rating of 10,000 pounds or less, and is manufactured on or after September 1, 1986, shall meet the requirements for convenience hooks, webbing tension relieving devices, and belt contact force.

Manual seat belts installed for compliance with this standard in front outboard designated seating positions of any vehicle, other than a walk-in van-type vehicle which has a gross vehicle rating of 10,000 pounds or less, and is manufactured on or after September 1, 1989, shall meet the requirements for belt contact force, plate access, retraction and seat belt guides, and hardware.

VEHICLE EQUIPMENT:

The vehicle's front outboard seating positions were equipped with manual Type 2 seat belts which must comply with the dynamic test requirements of S5.1; requirements for webbing tension-relieving devices (S7.4.2), belt contact force (S7.4.3), latchplate access (S7.4.4), retraction (S7.4.5), and seat belt guides and hardware (S7.4.6) apply.

CONVENIENCE HOOKS (S7.4.1):

Not applicable, the vehicle was not equipped with automatic seat belts.

WEBBING TENSION-RELIEVING DEVICE (S7.4.2)

The seat belt assembly on the front outboard seating positions did not have webbing tension-relieving devices.

TABLE 1Ø FMVSS 2Ø8 SEAT BELT COMFORT AND CONVENIENCE TEST SUMMARY
FRONT OUTBOARD DESIGNATED SEATING POSITIONS, (Cont'd)

BELT CONTACT FORCE (S7.4.3)

The belt contact force on the chest of the test dummy was Ø.3 pounds.

LATCHPLATE ACCESS (S7.4.4)

The seat belt latchplates, in their normal stowed position, were within the reach envelope.

The clearance test block moved unhindered to the latchplate or buckle.

RETRACTION (S7.4.5):

The seat belt automatically retracted when the seat belt latchplate was released.

The stowed seat belt webbing and hardware were not pinched when the door was closed.

SEAT BELT GUIDES AND HARDWARE (S7.4.6)

The seat cushion was not removable so that the seat back served as a function other than seating.

The seat was not removable.

The seat was not movable so that the space formerly occupied by the seat could be used for a secondary function.

Note: If the seat or seat cushion is removable or if the seat is movable so that the space formerly occupied by the seat can be used for a secondary function, the seat belt guides and hardware requirements do not apply.

TABLE 10 FMVSS 208 SEAT BELT COMFORT AND CONVENIENCE TEST SUMMARY

SEAT BELT GUIDES AND HARDWARE (S7.4.6)(Cont'd)

The webbing was designed to pass through the seat cushion or between the cushion and seat back.

The remaining two parts (the seat belt latchplate and the buckle) were accessible under normal conditions.

The latchplate and buckle did not pass through the guides provided and fall behind the seat when the belt was completely retracted (or detached if not retractable) and the seat was moved to any position.

FMVSS 208 SEAT BELT WARNING SYSTEM DATA

With an occupant in the driver's position and the lap belt/unibelt in stowed position and the ignition switch placed in the "start/on" position, the duration of audible warning signal and the reminder light were 6.9 and 6.2 seconds, respectively.

With an occupant in the driver's position and the lap belt/unibelt in use and the ignition switch placed in the "start/on" position, the duration of audible warning signal was 0 second and the duration of the reminder light operation was 6.2 seconds.

Note: The audible warning should not operate.

The wording of the visual seat belt warning was the symbol from Table 2 of FMVSS 101.

FMVSS 208 LABELING AND DRIVER'S MANUAL DATA

The labels which describe manufacturer's maintenance or replacement schedule for the crash-deployed occupant protection system were located on the sunvisors of the driver and the right front passengers.

The airbag system is required to be inspected in 10 years after the car manufacture date shown in the certification label.

Appropriate instructions concerning maintenance and/or replacement of this system were provided in the owner's manual on page 39.

A description of the functional operation of the system was provided in the owner's manual on pages 37-38.

A reference to the instructions and description of the system was included on the label.

TABLE 11 FMVSS 208 EQUIPMENT DATA, (Cont'd)

FMVSS 208 LABELING AND DRIVER'S MANUAL DATA (Cont'd)

An owner's manual was provided.

The owner's manual contained appropriate information concerning maintenance and/or replacement and a description of the functional operation of the systems on pages 36-40.

FMVSS 208 READINESS INDICATOR DATA

The vehicle contained a crash-deployed occupant protection system which was not totally mechanical. The readiness indicator was located on the left upper side of the instrument cluster.

The readiness indicator was clearly visible to the driver.

A list of the elements in the occupant restraint system, being monitored by the readiness indicator, was provided in the owner's manual on page 37.

TABLE 12 FMVSS 212, "WINDSHIELD MOUNTING", DATA SUMMARY

Vehicle Year/Make/Model/Body Style: 1995/Mitsubishi/Eclipse/3 Door

Vehicle NHTSA No.: CS5600 Test Date: 09/06/94

DETAILS OF WINDSHIELD MOUNTING SUCH AS RETENTION METHOD, TRIM TYPE, ETC.:

Rubber trim with glue retention

CLIPS OR BRACKETS USED TO RETAIN WINDSHIELD: None

FMVSS 212 REQUIREMENTS: The post-test periphery retention amount must be at least 75% of the pre-test periphery measurement for vehicles NOT equipped with automatic restraints, and 50% for each side of windshield for vehicles equipped with automatic restraint systems for front occupants.

FMVSS 212 TEST DATA:

Vehicle Year/Make/Model/Body Style: 1995/Mitsubishi/Eclipse/3 Door

Vehicle NHTSA No.: CS5600 Test Date: 09/06/94

PROTECTED ZONE LOWER EDGE REQUIREMENT:

The lower edge of the protected zone is determined by placing a 6.5" dia. rigid sphere weighing 15 pounds in a position such that it simultaneously contacts the inner surface of the windshield and the top surface of the instrument panel including padding. Draw the locus of points on the inner surface of the windshield contacted by the sphere across the width of the instrument panel. From the outermost contact points, extend the locus line horizontally to the edges of the windshield, and then draw a line on the inner surface of the windshield below and 1/2" distant from the locus line. The LOWER EDGE OF THE PROTECTED ZONE is the longitudinal projection onto the outer surface of the windshield of this line.

Vehicle Year/Make/Model/Body Style: 1995/Mitsubishi/Eclipse/3 Door

Vehicle NHTSA No.: CS5600 Test Date: 09/06/94

Fuel System Capacity from Owner's Manual = 16 gallons

Usable Capacity Figure Furnished by COTR = 16.9 gallons

Test Volume Range (92 to 94% of Usable Capacity)

= 15.6 to 15.9 gallons

Actual Test Volume = 15.7 gallons

Test Fluid Type: Stoddard Solvent ; Spec. Grav. = 0.77

Kinematic Viscosity = 1.788 centistokes; Color = Purple

Type of Fuel Pump: X Electric; ___ Mechanical

Does electric pump operate with ignition switch "On" and engine "Off"?

__ Yes; X No

Details of Fuel System:

The fuel tank was located in front of the rear axle. The fuel filler pipe was located on the right side. The fuel lines ran along the right side to the front.

Vehicle Year/Make/Model/Body Style: 1995/Mitsubishi/Eclipse/3 Door

Vehicle NHTSA No.: CS5600 Test Date: 09/06/94

NOMINAL DESIGN RIDING POSITION:

Driver Seat: Seat Back Angle = 27°

The seat back angle was adjustable and was positioned at the 6th notch in accordance with the seat back set procedure in the manufacturer's information. The seat back angle was measured on the seat back frame with the inclinometer.

Passenger Seat: Same as driver's seat.

SEAT FORE AND AFT POSITIONS:

Driver Seat: The seat track had 25 detents and was positioned at the 13th notch rearward from the foremost position.

Passenger Seat: Same as driver's seat.

STEERING COLUMN ADJUSTMENTS:

The steering column was positioned at the mid-point of its swing.

MMC ANSWERS ABOUT OVSC QUESTIONS FOR '95 MITSUBISHI ECLIPSE FMVSS 208 COMPLIANCE TEST (Cont'd)

	OVSC Question	MMC Answer
5	• If a pressure vessel is used to inflate the air bag, provide a copy of test reports or engineering analysis.	N.A. (not used)
6	• If an explosive device is used to inflate the air bag, provide a copy of test reports or engineering analysis to demonstrate that it meets S9.2.	• The explosive device (inflator) of our air bag system meets all the requirements of S9.2. • It is certified by the letters of Morton International Inc. and TRW Inc.. See Attachment No.2-1 (Driver's Side) See Attachment No.2-2 (Passenger's Side)
7	• For any automatic safety belt system, whether or not it is equipped with a tension-relieving device?	N.A.
8	• Whether the movable windows and vents were opened or closed for the certification tests?	• The movable windows and vent were positioned to full open condition on our test.
9	• Which test dummy was used in each seat for each of MMC certification tests ? • Submit dummy placement measurements including diagrams or photographs. • Whether the vehicle has a foot rest for the driver? • If the vehicle can be equipped with a split front bench seat, ---.	• Part 572 (E) (Hybrid-III) dummy was used in each front seat for the certification tests. • See Attachment No.3-1 (Driver's Side) See Attachment No.3-2 (Passenger's Side) • Yes • N.A. TEST VEHICLE INFORMATION

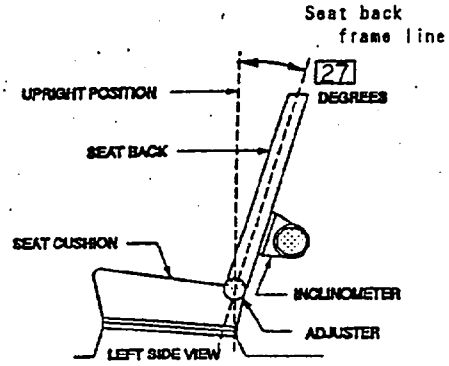
Vehicle Model Year & Make: 1995 DIAMOND STAR MOTORS CORPORATION
Vehicle Model & Body Style: MISTUBISHI ECLIPCE 2-DOOR HATCH BACK

1. NOMINAL DESIGN RIDING POSITION - -
For adjustable driver and passenger seat backs.
Please describe how to position the inclinometer to measure the seat back angle. Include description of the location of the adjustment latch detent if applicable.

Seat back angle for driver's seat = 27 degrees.
Measurement Instructions:
Adjust the seat back to be 27° with inclinometer on the side frame pipe.
Or, locate the seat back to the 6th step from the first locking position as 1 step.

Seat back angle for passenger's seat = 27 degrees.
Measurement Instructions:
Same as driver's.



2. SEAT FORE & AFT POSITIONS - -
Provide instructions for positioning the driver and front outboard passenger seat(s) in the center of fore and aft travel. For example, provide information to locate the detent in which the seat track is to be locked.

Positioning of the driver's seat:
The center position is 13th locking position from rearmost locking position as 1st. The pitch to be locked is 0.39 inches(10mm).

Positioning of the passenger's seat (if applicable):
Same as driver's.

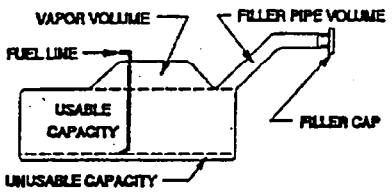
3. FUEL TANK CAPACITY DATA - -

3.1 A. "Usable Capacity" of standard equipment fuel tank = 16.9 gallons.

B. "Usable Capacity" of optional equipment fuel tank = —— gallons.

C. Capacity used when certification testing to requirements of FMVSS 301 = 15.9 gallons.

Operational Instructions:



VEHICLE FUEL TANK ASSEMBLY

3.2 Amount of Stoddard solvent added to vehicle for certification test = 15.9 gallons

3.3 Is vehicle equipped with electric fuel pump? ✓ YES ___ NO
If YES, does pump normally operate when vehicle's electrical system is activated? ___ YES ✓ NO

4. STEERING COLUMN ADJUSTMENTS - -

Steering wheel and column adjustments are made so that the steering wheel hub is at the geometric center of the locus it describes when it is moved through its full range of driving positions.
If the tested vehicle has any of these adjustments, does your company use any specific procedures to determine the geometric center.

Operational Instructions:

The steering column can be locked at any position from 15.1° to 18.4°.
