Title of Study	FMVSS 213: Investigation of Booster Seat Performance Metrics
Test Performer	TRI-University of Michigan Transportation Research Institute
Test Reference Number	NT1836
Contract Number	DTNH22-15-D-00017
Test Date	6/6/2018

Test ID: NT1836

Date performed: 6-6-2018

Test Personnel: MM, KDK, NRO, KB, JB

Test Type: Tests used the 2018 version of the proposed FMVSS 213 upgraded test bench (version 2018) with associated belt anchorages and a three-point belt with the surrogate shoulder belt retractor (version 2, 2018).

Purpose of Tests: To explore candidate booster metrics that assess the potential for occupant submarining and the quality of seat belt routing.

ATD: Hybrid III 6YO (tests NT1801-39) & Hybrid III 10YO (tests NT1840-45)

Test Configuration:

All tests run with FMVSS 213 pulse.

All tests run with FMVSS 213 (2014) updated dummy seating procedure and dummy add-ons (lap shield and posterior-pelvic pad).

The surrogate retractor (version 2) was configured to allow for ~50 mm of webbing payout to be similar to OEM retractor payouts. Tests NT1801-04 were run with the surrogate retractor pins in setting 3 and all subsequent tests (NT1805-45) were run with setting 2.

In tests NT1828-45, several layers of gaffer's tape were used to cover the gap between the dummy's shoulder and neck under the chest jacket to protect the dummy's chest bib should the shoulder belt fall into the gap.

Test configurations involve varying booster model.
