RibEye Crash Test Report

2020 Mini Cooper MDB Test

April 29, 2021

This document supplements the data presented in the Test Report. In the Test Report, the RibEye channels shown were up-sampled from 10 kHz as recorded by the RibEye system to 20 kHz to match the sampling rate of the rest of the data collected. When error codes appear in the data, the up-sampling caused anomalous overshoot as seen in the plots in Appendix B of the Test Report. This supplementary document includes new plots of the RibEye data sampled at 10 kHz as recorded, in which no overshoot occurs. In addition, a separate time channel for the 10 kHz sampling rate has been added to the EV5 file for RibEye.
