16. Abstract

A 48/24 kph 90° Impact (Moving Deformable Barrier) Compliance Tests was conducted on the subject 2023 Audi A3 Four Door Sedan in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure No. TP-214D-09 for the determination of FMVSS No. 214 Side Impact Protection compliance. The test was conducted at Calspan Corporation's Transportation Test Operations facility in Buffalo, New York on November 22, 2022.

The impact velocity of the Moving Deformable Barrier (MDB) was 52.80 kph, and the ambient temperature at the struck side (driver side) of the target vehicle at the time of impact was 21°C. The target vehicle post-test maximum crush was 157 mm at level 2. The test vehicle's occupant performance is as follows:

Measurement Description	Driver ATD (ES-2re)		
	Units	IARV	Result
Head Injury Criteria (HIC_{36})	N/A	1000	109.231
Maximum Rib Deflection	mm	44	16.243
Sum of Abdominal Forces	N	2500	602.134
Pubic Symphysis Force	N	6000	1367.938

Measurement Description	Passenger ATD (SID-IIs)		
	Units	IARV	Result
Head Injury Criteria (HIC_{36})	N/A	1000	282.663
Lower Spine Resultant Acceleration	G	82	48.574
Total Pelvic Force (sum of acetabular and iliac forces)	N	5525	2958.759
Maximum Thoracic Rib Deflection	mm	38*	23.357
Maximum Abdominal Rib Deflection	mm	45*	17.629

The two doors on the struck side of the vehicle did not separate from the body at the hinges or latches and the opposite doors did not open during the side impact event.

TABLE OF CONTENTS

SECTION 1
PURPOSE AND SUMMARY OF TEST

PURPOSE

This moving deformable barrier side impact test was conducted as part of the MY 2023 214 Side Impact Protection Compliance Test Program, sponsored by the National Highway Traffic Safety Administration (NHTSA), under Contract No. DTNH22-17-D-00078. The purpose of this test was to evaluate side impact protection in a 2023 Audi A3 Four Door Sedan. The side impact test was conducted in accordance with the Office of Vehicle Safety Compliance's Laboratory Test Procedure, TP-214D-09 dated September 2012.

SUMMARY

A 2023 Audi A3 Four Door Sedan was impacted on the left side by a Moving Deformable Barrier (MDB) which was moving forward in a 27° crabbed position to the tow road guidance system at a velocity of 52.80 kph (32.8 mph). The target vehicle was stationary and was positioned at an angle of 63° to the line of forward motion. The side impact test was conducted by the Calspan Corporation's Transportation Test Operations Center in Buffalo, New York on November 22, 2022. Pre-test and post test photographs of the test vehicle, the MDB and test dummies are included in this report.

Test dummies were place in both the driver and left rear designated seating postions according to instructions specified in the OVSC Test Procedure data September 2012. The side impact event was documented by 9 cameras. Camera locations and other pertinent camera information are included in this report.

The ES2re male dummy was instrumented with triaxial accelerometer packs located in the head, three rib displacement transducers located in the chest, three load cells located in the abdomen and a load cell located in the pubic symphysis.

The SID-IIs female dummy was instrumented with triaxial accelerometer packs located in the head and the spine and load cells located in the pubic symphysis and acetabulum. A summary of each dummy's configuration and performance verification test data has been included in this report along with the dummy response traces.

Injury readings for the dummies were recorded as follows:

INJURY READINGS

ES-2re Injury Criteria	Units	Max. Allowable IARV	Measured Value	Pass/Fail
HIC		1000	109.231	Pass
Upper Rib Deflection	mm	44	12.779	Pass
Mid Rib Deflection	mm		13.519	Pass
Lower Rib Deflection	mm		16.243	Pass
Abdominal Load (front)	N		161.322	
Abdominal Load (mid)	N		216.015	
Abdominal Load (rear)	N		306.689	
Sum of Abdomen Forces	N	2500	602.134	Pass
Pubic Symphysis	N	6000	1367.938	Pass

INJURY READINGS

SIDIIs Injury Criteria	Units	Max. Allowable IARV	Measured Value	Pass/Fail
HIC		1000	282.663	Pass
Max Spine Acceleration	g	82	48.574	Pass
Acetabulum Force	N		2428.508	
Iliac Force	N		693.064	
Sum of Acetabular and Iliac	N	5525	2958.759	Pass

SECTION 2

OCCUPANT AND VEHICLE INFORMATION

This section contains information reporting for the following Data Sheets:

DATA SHEET NO. 1
TEST VEHICLE INFORMATION AND OPTIONS

Test Vehicle: 2023 Audi A3 Four Door Sedan NHTSA No.: C20235803
Test Facility: Calspan Test Date: 11/22/2022

TEST VEHICLE INFORMATION AND OPTIONS

Make	Audi
Model	A3
Body Style	Four Door Sedan
VIN	WAUAUDGYXPA012248
Body Color	Black
Engine Displacement (L)	2.0
Type/No. Cylinders	I4
Engine Placement	Transverse
Transmission Type	Automatic
Transmission Speeds	7-Speed
Overdrive	Yes
Final Drive	Front Wheel Drive
Odometer Reading (km/mi)	33 mi

Anti-Lock Brakes (ABS)	Yes
All-Wheel Drive (AWD)	No
Traction Control System (TCS)	Yes
Electric Stability Control (ECS)	Yes
Side Curtain Airbags	Yes
Torso Airbags – Front Seats	Yes
Torso Airbags – Rear Seats	Yes
Combination/Head Torso Bag	No
Pelvic Airbag – Front Seats	No
Pelvis Airbag – Rear Seats	No
Knee Airbag – Driver	Yes
Knee Airbag – Front Passenger	Yes
Seat Belt Pretensioners – Front Seats	Yes
Seat Belt Pretensioners – Rear Seats	Yes
Seat Belt Load Limiter – Front Seats	Yes
Seat Belt Load Limiter – Rear Seats	Yes
Tire Pressure Monitoring System (TPMS)	Yes
Tilt Steering Wheel	Yes
Automatic Door Locks (ADL)	Yes
Power Window Auto-reverse	Yes
Power Seats	Yes

DATA SHEET NO. 2
GENERAL TEST AND VEHICLE PARAMETER DATA

Test Vehicle: 2023 Audi A3 Four Door Sedan NHTSA No.: C20235803
Test Facility: Calspan Test Date: 11/22/2022

TIRE PRESSURES

	Units	LF	RF	LR	RR
As Delivered	kPa	271	264	268	263
As Tested	kPa	280	280	260	260

TEST VEHICLE AXLE WEIGHTS

	Units	As Delivered (UVW)			Fully Loaded			As Tested		
		Front	Rear	Total	Front	Rear	Total	Front	Rear	Total
Left	kg	454	302		499	380		494	367	
Right	kg	459	296		468	347		477	345	
Ratio	%	60.4	39.5		57.1	42.9		57.7	42.3	
Totals	kg	913	598	1511	967	727	1694	971	712	1683

TEST VEHICLE TARGET WEIGHT (TVTW) CALCULATION

Measured Parameter	Units	Value	
As Delivered Weight (UVW)	kg	1511	(A)
Weight of 2 P572 ATDs	kg	131	(B)
Rated Cargo / Luggage Weight (RCLW)	kg	49.8	(C)
Calculated Vehicle Target Weight (TVTW)	kg	1691.8	(A+B+C)

TEST VEHICLE ATTITUDES AND CG

Wheel Opening Location	Distance (grd to ref. point above wheel opening in mm)		Difference (mm)	Meets Requirement**
	Fully Loaded	As Tested		
Left Front	684	686	2	Yes
Right Front	693	693	0	Yes
Left Rear	672	682	10	Yes
Right Rear	682	676	6	Yes

**** The "As Tested" vehicle attitude measurements must be equal to or within ± 10mm of the "Fully Loaded" vehicle attitude measurements at each wheel well. Indicate "Yes" or "No" for "Meets Requirements".*

MDB IMPACT POINT DATA

Measured Parameter	Distance (mm)	Met Requirement
Test Vehicle Wheelbase	2630	
Target Vertical Impact Reference Line Aft of Front Axle	375	Yes
Actual Impact Point Location (fore-aft, above – below)	+15 / -8	Yes

Note: Fore or above the target impact point is positive (+). Aft or below the target impact point is negative (-)

WEIGHT OF BALLAST AND VEHICLE COMPONENTS REMOVED TO MEET TVTW

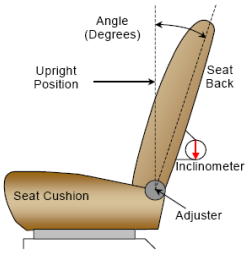
Component Description	Weight (kg)
Trunk carpeting	5
Spare tire & Jack	18
Ballast (if any)	0

DATA SHEET NO. 3
SEAT AND SEAT BELT ANCHORAGE ADJUSTMENT DATA

Test Vehicle:	2023 Audi A3 Four Door Sedan	NHTSA No.:	C20235803
Test Facility:	Calspan	Test Date:	11/22/2022

SEAT BACK ANGLE ADJUSTMENT

The driver's seat back is positioned to the manufacturer's designated design angle. The front center and front passenger's seat backs are positioned in a similar manner as the driver's seat back. The struck side rear seat back is positioned such that the dummy's head is level. The rear center and non-struck side rear outboard seat backs are positioned in a similar manner as the struck-side rear seat back.



FRONT SEAT ASSEMBLY

Seat	Total Seat Back Angle Range		Test Position from Most Upright	
	Degrees	Detents*	Degrees	Detents*
Driver Seat w/Seated Dummy	58.6	Power	18.6	Powered
Passenger w/Seated Dummy	58.6	Power	18.5	Powered

SEAT POSITIONING

The driver's seat, front center seat (if applicable), and right front passenger's seat should be set to the mid-track, lowest, mid-angle position. The struck-side rear passenger's seat, rear center seat, and non-struck side rear passengers' seats should be set to the rear-most, lowest, mid-angle position.

SEAT HEIGHT AND ANGLE

Seat	As Tested SCRL Angle (Mid) (°)	As Tested SCRP Height (mm)	SCRP Height Position	SCRP Height (mm)		
				Rearmost	Mid-Fore / Aft	Forward-Most
Driver Seat	19.5	13	Max	72	81	90
			Mid	37	47	56
			Min	3	13	22
Front Passenger Seat	20.7	15	Max	67	79	85
			Mid	35	47	54
			Min	3	15	22

SEAT FORE / AFT POSITION

Seat	Total Fore / Aft Travel		Test Position from Forward most Position	
	mm	Detents*	mm	Detents*
Driver Seat	246	N/A	123	N/A
Front Passenger Seat	246	N/A	123	N/A

SEAT BELT ANCHORAGE ADJUSTMENT

Seat	Total # of Positions	Placed in Position #
Driver Seat	4 (0-3)	Uppermost
Rear Passenger Seat	Fixed	Fixed

HEAD RESTRAINT ADJUSTMENT

Seat	Total # of Positions	Placed in Position #
Driver Seat	4 (0-3)	Uppermost
Rear Passenger Seat	2 (0-1)	Lowermost

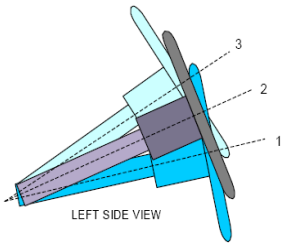
DATA SHEET NO. 4
FUEL SYSTEMS AND STEERING WHEEL POSITION DATA

Test Vehicle:	2023 Audi A3 Four Door Sedan	NHTSA No.:	C20235803
Test Facility:	Calspan	Test Date:	11/22/2022

STEERING COLUMN ADJUSTMENT

Steering wheel and column adjustments are made so that the steering wheel hub is at the center of its geometric locus it describes when it moves through its full range of motion.

	Degrees	Fore / Aft Position (mm)
Lowermost – Position 1	18.9	
Geometric Center – Position 2	21.6	
Uppermost – Position 3	24.2	
Telescoping Steering Wheel Travel		64
Test Position	21.6	32

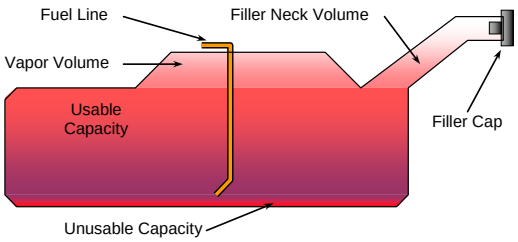


STEERING COLUMN ASSEMBLY

FUEL PUMP

Describe the fuel pump type, details about how it operates, and the location of the fuel filler neck.

The vehicle is equipped with an electric fuel pump. The fuel filler neck is on the right side of the vehicle. The pump creates positive pressure in the fuel lines, pushing the gasoline to the engine. See form 1 for more information.



VEHICLE FUEL TANK ASSEMBLY

DATA SHEET NO. 14
POST-TEST OBSERVATIONS

Test Vehicle:	2023 Audi A3 Four Door Sedan	NHTSA No.:	C20235803
Test Facility:	Calspan	Test Date:	11/22/2022

TEST DUMMY INFORMATION AND CONTACT POINTS

Dummy Body Part	Front Occupant	Rear Occupant
Head Contact	Curtain Airbag, Headliner & Headrest	Curtain Airbag, Headliner, center seat headrest
Upper Torso Contact	Curtain Airbag & Headliner	Seatback & Torso Pelvis Airbag
Lower Torso Contact	Pelvis/Torso Airbag & Seatback	Seatback
Left Knee Contact	Driver Door	Passenger Door
Right Knee Contact	Left Knee	Left Knee

POST-TEST DOOR PERFORMANCE

Description	Front	Rear
Left Side Doors	Jammed Shut	Jammed Shut
Right Side Doors	Closed & Operational	Closed & Operational
Hatch and Other Doors	N/A	Hatch Opened during impact
Seat Movement	None	None
Seatback Failure	No	No

*Note: Description for door opening must be specific with the following three categories: Remained closed and operational, opened/unlatched during the crash, or jammed shut. Sometimes the door is jammed and unlatched. If the door cannot be opened, then note the door as jammed shut. If open, measurement must be taken for the width of the door opening (mm).

POST-TEST STRUCTURAL OBSERVATIONS

Critical Areas of Performance	Observations and Conclusions
Pillar Performance	B-Pillar Buckled
Sill Separation	None
Windshield Damage	None
Side Window Damage	Both impact side windows shattered
Other Notable Effects	Trunk opened upon impact and inspection of the latch mechanism revealed that the mechanism was intact and did not fail during impact.

SUPPLEMENTAL RESTRAINT SYSTEM INFORMATION

Restraint Type	Front Occupant		Rear Occupant	
	Installed	Deployed	Installed	Deployed
Frontal Airbag	Yes	No	No	N/A
Side Torso Airbag	Yes	Yes	Yes	Yes
Head Airbag	No	N/A	No	N/A
Curtain Airbag	Yes	Yes	Yes	Yes
Seat Belt Pretensioner	Yes	Yes	Yes	Yes
Other

Table of Contents

Security Level: Confidential (VIN: WAUAUDGYXPA012248)

Section 1

Project Set-up

Instruction: Insert Engineer's Checklist, Customer's Statement of Work or Test Request after this tab.

- [ ] Inserted Completed Engineer's Checklist.
- [ ] Inserted Customer's SOW / Test Request.
- [x] Inserted Copy of the Form 1.

Section 2

Vehicle Inspection

Instruction: Complete the checked task:

- [x] Fully Complete the Following Section.
- [ ] The Following Section Does Not Need to be Completed.

Incoming Vehicle Checklist:

Performed by:	Vanessa Hansen	Date:	11/4/22

Complete the following fields:

Dealer	Audi South Coast
Date vehicle arrived:	10/27/22
Model Year	2023
Make	Audi
Model	A3

Verify the following and place a checkmark in the appropriate box. Any variances must be reported to the Technical Director within 2 working days of the vehicle's arrival:

Yes	No	
✓		All options listed on the 'window sticker' are present on the test vehicle.
✓		Tires and wheel rims are the same as listed.
✓		There are no dents or other interior or exterior flaws.
✓		The vehicle has been properly prepared and is in running condition.
✓		The glove box contains an owner's manual, warranty document, consumer information, and extra set of keys.
✓		Proper fuel filler cap is supplied on the test vehicle.
✓		Spare tire, jack, lug wrench and tool kit (if applicable) is located in the vehicle cargo area.
✓		The odometer reflects that the vehicle has been driven less than or equal to 200 miles.
✓		The VIN (vehicle identification number) matches the number supplied by NHTSA.
✓		Vehicle is equipped / matches description provided by NHTSA.
✓		Vehicle warning lights (i.e. check engine, SRS, etc.) are not illuminated.
✓		Floor mats come with vehicle (front and rear). Verify with window sticker.
	✓	Is vehicle a hybrid or full electric vehicle that requires FMVSS 305?

Vehicle Condition Checklist:

Performed by:	VINCE P.	Date:	11/21/22

Complete the following fields:

Make	AUDI	Anti-lock Brakes (ABS)	YES
Model	A3 40 TFSI	All-Wheel Drive (AWD)	NO
Body Style	4-DOOR SEDAN	Traction Control System (TCS)	YES ~~YES~~ VB
Vin	WAUAUDGYXPA012248	Electronic Stability Control (ECS)	YES
Body Color	BLACK	Side Curtain Airbags	YES
Engine Disp (liters)	2.0	Torso Airbag – Front Seats	YES

3

Attitudes, Weights, Mechanical Prep & Electrical Connections

Weight - As Delivered Condition:

Performed by:	Lucas Stoffel	Date:	11/17/22

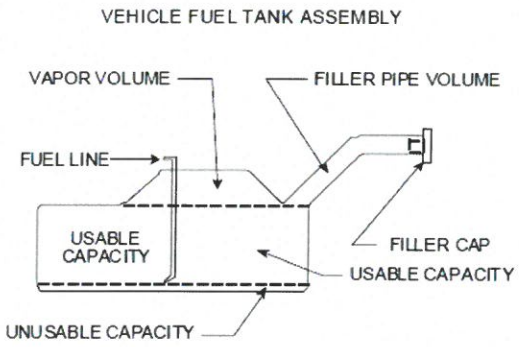
Initial:

LS Drain the fuel from the fuel tank.

LS Run engine until all fuel remaining in the fuel delivery system is used and engine stops.

LS Describe the fuel pump type, details about how it operates and the location of the fuel filler neck in the space provided below.

ELECTRIC FUEL PUMP LOCATED ON TOP OF FUEL TANK



Yes	No	
✓		Is the vehicle equipped with an electric fuel pump?
✓		If yes, does the pump normally operate when the vehicle's electrical system is activated?

Initial:

LS Record the usable fuel tank capacity of both standard and optional (if applicable) fuel tanks in the space provided below as stated in the supplied FORM1.

LS Record the fuel tank capacity of both standard and optional (if applicable) fuel tanks as supplied in the owner's manual in the space provided below.

LS Calculate 1/3 of the usable capacity of the tank(s) (as supplied on Form 1) and record the calculated value in the space provided below.

LS Calculate 93% of the usable capacity of the fuel tank(s) and record the calculated value in the space provided below.

LS Using gasoline, fill the fuel tank to 100% of the usable capacity as supplied on Form 1.

LS Record the amount of fuel added for the "As Delivered" weight condition in the space provided below.

Note: Stoddard solvent shall be free of debris. It is considered debris-free only if upon filtering with a 10 micron filter, no solid debris is retained on the filter media or in any conduit, container or vessel upstream from the filter paper (e.g. debris is not allowed to be present in the funnel, pump or container).

Fuel Tank Capacity Data

Usable Capacity of "Standard Tank" (see Form No. 1)	50	liters
Usable Capacity of "Optional Tank" (see Form No. 1)	55	liters
Usable Capacity of Standard Tank (see Owner's Manual)	50	liters
Usable Capacity of Optional Tank (see Owner's Manual)	55	liters
1/3 of Usable Capacity	16.5	liters
93% of Usable Capacity	46.5	liters
Gasoline to Achieve 100% of Capacity (As Delivered)	50	liters

Initial:

LS Crank the engine to fill the fuel delivery system with gasoline

LS Fill the coolant system to capacity.

LS Fill the engine with motor oil to the maximum mark on the dip stick.

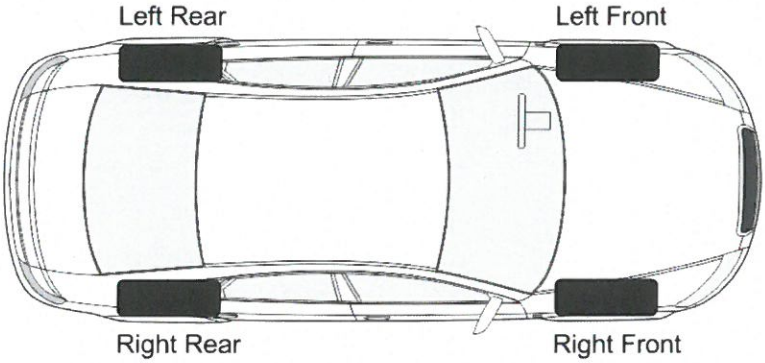
LS Fill the transmission with transmission fluid to full capacity.

LS Fill the brake reservoir with brake fluid to its normal level.

LS Fill the windshield washer reservoir to capacity.

LS Inflate the tires to the cold tire pressure indicated on the tire placard. If no tire placard is available, inflate the tires to the recommended pressure in the owner's manual and record the pressure for each tire in the space provided below.

	Units	LF	RF	LR	RR
As Delivered	kpa	271	264	268	263
Tire Placard	kpa	280	280	260	260
Owner's Manual	kpa	280	280	260	260
Tire Pressure Gage Unique Identifier:			—		



Initial:

LS Weigh the vehicle at each wheel and add the weights together to determine the "As Delivered" (or "Unloaded Vehicle") weight.

LS Record the weight measurements and Weight Scale's Unique Identifier in the space provided below.

		As Delivered (UVW)		
	Units	Front Axle	Rear Axle	Total
Left	kg	454	302	W_{Left} = 756
Right	kg	459	296	W_{Right} = 755
Ratio	%	60.4	39.5	
Totals	kg	W_F = 913	W_R = 598	1511
Weight Scale Unique Identifier:				

Initial:

LS Calculate the Rated Cargo and Luggage Weight (RCLW) and record this value in the space provided below. For trucks, MPV's or Buses - **If the RCLW calculated is greater than 136 kg, use 136 kg as the RCLW.**

LS Calculate the Test Vehicle Target Weight by adding the "As Delivered" weight, the RCLW, and the weight of the fully instrumented dummies in the space provided below.

Rated Cargo and Luggage Weight Calculation	Units	Value	
Vehicle Capacity Weight (VCW - From Vehicle Placard)	kg	390	(A)
Reduced Load Capacity (if Applicable)	kg	N/A	(B)
Designated Seating Capacity (DSC - From Vehicle Placard)		5	(C)
Rated Cargo and Luggage Weight (RCLW)	kg	49.8	(C x 68.04 kg) – (A-B)
Is the RCLW > 136 kg? If yes use 136 kg as RCLW	kg	N/A	
Target Test Weight Calculation	Units	Value	
Total As Delivered Weight (UVW = Unloaded Vehicle Wgt.)	kg	1511	(A)
Actual Weight of 1 – ES-2re ATD & 1 – SID-IIs ATD **(Ask ATD Lab for specific ATD Weight)**	kg	131	(B)
Rated Cargo / Luggage Weight (RCLW)	kg	49.8	(C)
Calculated Vehicle Target Weight (TVTW)	kg	1691.8	(A+B+C)
Target Test Weight (min):	kg	1682.8	(A+B+C) – 9.0 kg
Target Test Weight (max):	kg	1687.3	(A+B+C) – 4.5 kg

Attitude - As Delivered Condition:

Performed by:	Lucas Stoffel	Date:	11/17/22

Note: Do not lift the vehicle off the ground until the attitude measurements have been taken.

Initial:

LS With the vehicle in the "As Delivered" weight condition, place it on a flat, level surface.

LS Place transmission in neutral. Note: If the vehicle has an Auto-Leveling, the ignition must be set to the "on" position. If the vehicle is equipped with a self-adjusting hydraulic system, contact the COTR for further guidance on attitude measurements.

LS Exercise the suspension by rolling the vehicle forward and rearward approximately 4 to 6 feet. Repeat this step three to four additional times.

LS Mark a point on each vehicle body above the center of each wheel.

LS Measure the perpendicular distance from the level surface to the four (4) points marked on the vehicle and record each.

Vehicle Attitudes	Units	LF	RF	LR	RR
As Delivered	mm	694	694	703	707
Tape Measure Unique Identifier:			–		

CG - As Delivered Condition:

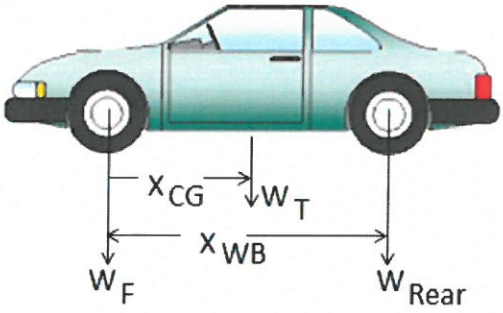
Performed by:	VH	Date:	11/22/22

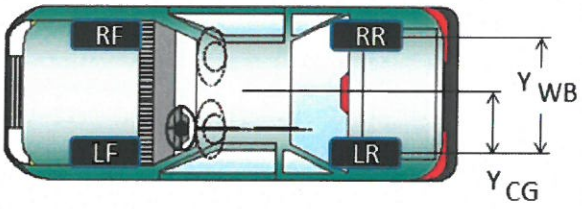
Initial:

VH

Measure and record the vehicle distances and copy the weights from the previous section in the space provided below in order to calculate the vehicle CG aft of the front axle.

Center of Gravity Calculation:





$$X_{CG} = \frac{X_{WB} \times W_{Rear}}{W_{Total}}$$ (From Front Axle)

$$Y_{CG} = \frac{Y_{WB} \times W_{Right}}{W_{Total}}$$ (From Left Wheel Centerline)

X_{CG} = X_{WB} X W_{Rear}

1048 mm (1041 QP) = 2630 mm X 598 kg / 1511 kg

W_{Total}

Y_{CG} = Y_{WB} X W_{Right}

1511 mm / 2 = 758.5

1518 mm (X 755) kg / 1511 kg

W_{Total}

Test Vehicle Center of Gravity (CG)	Units	As Delivered	
Vehicle CG (Aft of Front Axle)	mm	1041	X_{CG}
Vehicle CG (Left (+) / Right (-) from Longitudinal Centerline)	mm	0.5	Y_{CG}

Weight – Fully Loaded Condition:

Performed by:	Luke C + Jeff W	Date:	11-21-22

Initial:

LC+JW With the vehicle in the "As Delivered" weight condition, load the vehicle with the ballast equal to the RCLW placed in the luggage or load carrying/cargo area. Center the load over the longitudinal centerline of the vehicle.

LC+JW Place the weight of the fully instrumented test dummy (with clothes and shoes) into the appropriate seating positions. **(Ask ATD Lab for specific ATD Weight)**

LC Reference weight: Driver 178.6 lbs.

LC Reference weight: Rear Passenger 110.2 lbs.

LC Weigh the vehicle at each wheel and add the weights together to determine the "Fully Loaded" weight. Record the weight measurements in the space provided below.

		Fully Loaded		
	Units	Front Axle	Rear Axle	Total
Left	kg	499	380	W_{Left} = 879
Right	kg	468	347	W_{Right} = 815
Ratio	%	57.1 %	42.9 %	
Totals	kg	W_F = 967	W_R = 727	1694
Weight Scales Unique Identifier:			400323	

Attitude - Fully Loaded Condition:

Performed by:	Luke C + Jeff W	Date:	11-21-22

Initial:

LC With the vehicle in the "Fully Loaded" weight condition, place it on a flat, level surface.

Note: If the vehicle has an Auto-Leveling, the ignition must be set to the "on" position. If the vehicle is equipped with a self-adjusting hydraulic system, contact the COTR for further guidance on attitude measurements.

JW Exercise the suspension by rolling the vehicle forward and rearward approximately 4 to 6 feet. Repeat this step three to four additional times.

LC Measure the perpendicular distance from the level surface to the four (4) points previously marked on the vehicle and record each in the space provided below.

LC Record the Unique Identifier of the inclinometer used to complete these measurements in the space provided below.

Vehicle Attitudes	Units	LF	RF	LR	RR
Fully Loaded	mm	684	693	672	682
Tape Measure Unique Identifier:			—		

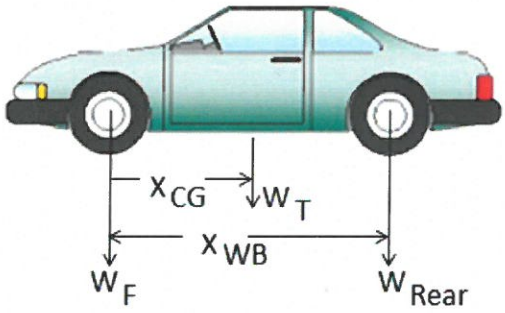
CG - Fully Loaded Condition:

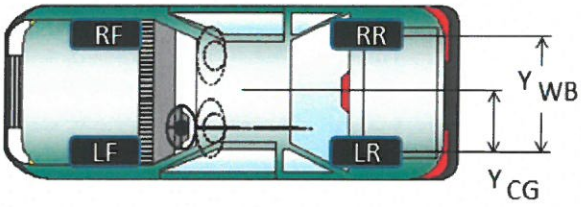
Performed by:	QP	Date:	11/22

Initial: QP

Measure and record the vehicle distances and copy the weights from the previous section in the space provided below in order to calculate the vehicle CG aft of the front axle and left (+) / right (-) from the longitudinal centerline.

Center of Gravity Calculation:





$$X_{CG} = \frac{X_{WB} \times W_{Rear}}{W_{Total}}$$ (From Front Axle)

$$Y_{CG} = \frac{Y_{WB} \times W_{Right}}{W_{Total}}$$ (From Left Wheel Centerline)

X_{CG} = X_{WB} X W_{Rear} / W_{Total}

1129 mm = 2630 mm X 727 kg / 1694 kg

Y_{CG} = Y_{WB} X W_{Right} / W_{Total}

1518 mm / 2 = 730

1518 mm (X 815) kg / 1694 kg

Test Vehicle Center of Gravity (CG)	Units	As Delivered	
Vehicle CG (Aft of Front Axle)	mm	1129	X_{CG}
Vehicle CG (Left (+) / Right (-) from Longitudinal Centerline)	mm	29	Y_{CG}

Drain Fuel and Paint Vehicle:

Performed by:	Lucas Stoffel	Date:	11/17/22

Initial:

LC Remove the ballast weight (RCLW) from the cargo area.

LS Drain the fuel tank. Use caution when draining the fuel. Do not damage or remove any fuel system components.

LS Using purple dyed Stoddard solvent fill the tank to 93 % (±1%) of the usable capacity as supplied on Form 1 found in a previous section.

LS Record this amount of Stoddard solvent in the space provided below along with the Unique Identifier of the meter used to conduct this task.

LS Record this amount on the inside of the fuel filler lid.

Actual Amount of Solvent Used in Test	46.5	liters
Pump Meter Unique Identifier	400605	

Yes	No	
√		Is the Actual Amount of Solvent Used in the test equal to 93% ± 1% of the Usable Capacity stated in on Form No. 1?

Initial:

LC Disable all side airbags on the non-struck side of the vehicle per manufacturer's instructions. If manufacturer will be here for the test confirm that the manufacturer has disabled these airbags prior to conducting the test.

N/A Disable vehicle Daytime Running Lights (if equipped).

N/A Remove horn fuse.

N/A Tape off interior airbag covers, instrument cluster, transmission gear selector, and airbag cut-off switch (if equipped).

LC Paint vehicle interior surfaces such as the instrument panel, A-post trim panels, door trim panels, console, etc., with flat white paint. Note: Do not paint points marked on dash if they are present before painting. Note: The air bag indicator light on the dash shall NOT be painted so as to be visible prior to testing. Also be sure not to paint over passenger air bag indicator light.

LS Black out mirrors.

LS Place driver and passenger front windows in the fully open position. Place all other windows and vents in the fully closed position unless otherwise specified by the COTR.

N/A Adjustable cowl tops or other adjustable panels in front of the windshield should be placed in the position used under normal operation during inclement weather.

LS Evacuate refrigerant.

N/A Tap brakes for abort.

LS Drain the engine oil *

LS Drain the transmission fluid *

N/A Drain the transfer case (4WD) *

LS Drain the engine coolant *

LS Drain the windshield washer fluid *

N/A Drain the power steering fluid *

*Note: Ensure that no fluids are leaking from the vehicle after being drained. Seal any leaks before vehicle is transported to the test track.

Mechanical Preparation:

Performed by:	Luke Crane	Date:	11-21-22

Initial:
LC Remove trunk carpeting, spare tire and jack (in trunk). Note: Per the NHTSA procedure, the spare tire, rear radio speakers, interior door trim and windows on the non-struck side, outboard mirrors on non-struck side taillights and rear bumper can be removed – IF NECESSARY. Refer to the Form 1 for a list of components that the manufacturer will allowed to be removed from the vehicle.

Equipment that is no longer on the test vehicle:

Description	Weight		Description	Weight	
Trunk carpeting	5	kg	N/A	N/A	kg
Spare tire	15	kg			kg
Jack	3	kg			kg
Rear speaker	—	kg			kg
Tail light	—	kg			kg
		kg			kg

Weight Scale Unique Identifier:	400323

Explanation for equipment removal:

Instrumentation Plate

Initial:		Description	Qty.
CS	1	**Trunk Release** NOT FOR REAR. Cut trunk release cable inside of vehicle and route outside to rear deck lid.	1
LC	2	**Hood Release** NOT FOR FRONTAL. Cut hood release cable near fender and tape to bumper.	1
JW	3	**Instrumentation Plate** Install instrumentation plate in trunk. Note location of all fuel components and use caution when drilling holes.	1
N/A	4	**Abort Package** Install abort package on instrumentation plate leading to rear brakes. Verify no leaks.	0
N/A	5	**Roof Camera Mount** Interior T-Bar, stay clear of side curtain air bags when drilling.	0
JW	6	**Side Door Camera Mount**	2
LC	7	**Hood Camera Mount**	1
N/A	8	**Toe Pan Camera Mount** Place seat in test position. Install toe pan camera in corresponding footwell area as far back as possible. Check for fuel lines before drilling.	0
JW	9	**LED Light** On the camera mount, attach (2) LED lights to either side of each camera (2 in total).	3
N/A	10	**Remote Battery and Cable** Route remote battery cable over the vehicle on the non-struck side to the monitor box. Not needed for AGM type battery.	0

JW	11	**Battery Monitor Box**	1
		Mount the battery monitor box to the right rear corner / non-struck corner.	
✓	12	**Umbilical Hangar**	1
		Attach the umbilical hanger to rear quarter panel on same side as umbilical	
N/A	13	**Air Bag Monitor**	0
		As per test request, connect inductive pickup to corresponding airbag positive (+) wire.	
N/A	14	**Overhead Target Bar**	0
		Refer to Vehicle Targeting section	
JW	15	**Trigger**	2
		Tape (2) triggers centered on the front hood and run cables to the truck / cargo area. Leave 2 feet of cable slack on hood.	
N/A	16	**Flash Unit**	0
		Attach flash units.	
✓	17	**LED Light Box**	1
		Mount one LED Light box to the instrumentation plate.	
LC	18	**Camera Network Box**	1
		Mount on instrumentation plate or rear floor pan depending on camera placement. Only 1 cable per camera, no extensions.	
✓	19	**Breakout Box / Hub**	1
		Mount Breakout Box hub to instrumentation plate.	
✓	20	**DAU (KI/MINI)**	3
		Mount (3) DAUs to the instrumentation plate.	

N/A	21	**Wireless Antenna**	1
		Mount (1) wireless antenna within the trunk / cargo compartment.	
N/A	22	**Speed Trap Bar**	0
		Fasten speed trap bar to rear bumper of vehicle, opposite side of umbilical. (395 mm minimum height)	
✓	23	**25ft Camera Cable**	3
✓	24	**IDT Camera**	3
		Mount (2) IDT cameras to the onboard camera mounts.	
N/A	25	**GoPro Camera**	0
N/A	26	**Seat Belt Displacement Sensor**	0
		Screw displacement sensor bracket to corresponding pillar in line with seat belt at thorax height as per dummy placement	
N/A	27	**Seat Belt Load Cell**	0
		(See Form 1) - Place (2) seat belt load cells on the front driver's seat. Place (2) seat belt load cells on the front passenger seat.	

Onboard Camera Installation:

Performed by:	MP	Date:	11/21/22

- [x] Install Camera Hub with Power & Trigger Cables
- [x] Install On-Board Camera's & Cables to Mounts
- [x] Check to make sure all required camera views are met. If not readjust camera mounts until all required views are met. (See photo references below)
- [x] Verify the Battery is fully charged
- [x] Install On-Board Lights Battery Box & ensure all light cables reach the box. If they do not install extension cables.
- [x] Tie down all wiring related to the cameras and lights
- [x] Pin all onboard cameras & camera bars to stabilize images during the impact.

High speed camera and light mounts photo reference:

High speed camera (1000 fps): Camera #7 – Onboard Dummy Front View and two LED lights to capture the following field of view:

High speed camera (1000 fps): Camera #8 –Onboard Dummy Side View and two LED lights to capture the following field of view:

High speed camera (1000 fps): Camera #9 – Onboard Dummy Rear Passenger Side View and two LED lights to capture the following field of view:

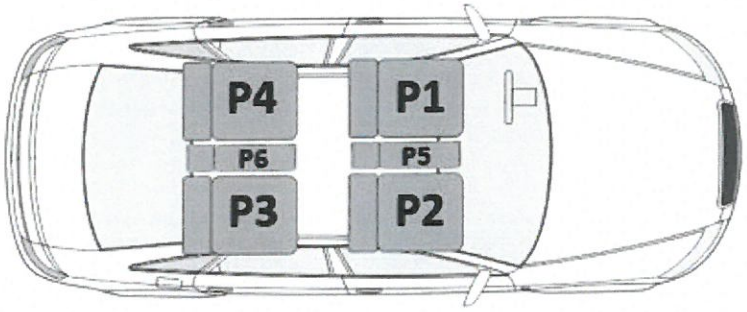
Seat Positioning, Seat Setting, H-Point & Targeting

1st Row Seat Positioning – Reference Marks:

Performed by:	David Hooper	Date:	11/16/2022

Tape Measure Unique Identifier:	400602
Inclinometer Unique Identifier:	401133

Instructions: In this section there are three sets of check marks. The first row corresponds with the front driver seat (P1), the second row corresponds with the front center seat (P5) and the third row corresponds with the front passenger seat (P2).



Setting the Seats - Driver, Front Center, and Front Passenger Seats
Set the driver, front center (if applicable), and front passenger seats accordingly:

Initial Settings ----------

Initial:

DH 1. **Determine the Seat Type**

Visually inspect the front seats to determine its type (i.e., bucket or bench).

Driver Seat:	Bench_____	Bucket DH
Front Outboard Passenger Seat:	Bench_____	Bucket DH
Front Center Seat:	Bench N/A	Bucket N/A

P1	P5	P2
DH	N/A	DH

2. **Position lumbar supports**
Position the seat's adjustable lumbar supports to the lowest, retracted or deflated adjustment positions.

☐ N/A, No lumbar adjustment

DH | N/A | DH

3. **Position additional supports**
Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position.

N/A, No additional support adjustment

N/A | N/A | N/A

4. **Position leg supports**
Position an additional leg support system in its rearmost position.

DH

N/A, No additional support adjustment

DH | N/A | DH

5.2.1. **Position head restraint**
Using any adjustment of the head restraint, position it to its highest position.

DH | N/A | DH

5.2.2. Using any adjustment of the head restraint, position it to the full forward position. If it rotates, rotate it such that the head restraint extends as far forward as possible.

N/A – The test vehicle is equipped with automatically adjusting head restraints or there is no head restraint adjustment.

DH | N/A | N/A

6. **Mark the longitudinal centerline of the seat**

DH

6.1 Driver's seat:
If adjustable, place the seat back in its most vertical (upright) position. For bucket seats, locate and **mark** for reference the intersection of a vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface, seat back and head restraint. For bench seats, draw a line along the intersection of a vertical longitudinal plane that passes through the centerline of the steering wheel and the seat cushion upper surface, seat back and head restraint.

DH | N/A | DH

7. **Mark the range of seat travel**
Prior to marking the seat, move the seat through its full range of motion using all available controls. Separately, operate each control to determine whether it moves the seat and/or seat cushion primarily in the fore-aft or up-down directions.

Seat Fore/Aft Positioning	Total Fore/Aft Travel	Placed in Position #
Driver	246	M123
Front Passenger Seat	246	M123
Front Center Seat	N/A	N/A

DH | N/A | DH

7.1 Mark a point (seat cushion reference point - **SCRP**) on the side of the seat cushion that is between 150 mm and 250 mm from the front edge of the seat cushion. For seat cushions that move up and down independently from the seat housing, mark the point on the side of the cushion in an area that will not be obscured by the seat housing when the seat cushion is at its lowest height position.

DH | N/A | DH

7.2 Draw a horizontal line (seat cushion reference line - **SCRL**) through the **SCRP**.

DH | N/A | DH

7.3 Use only the controls that primarily move the seat in the fore-aft direction to move the **SCRP** to the rearmost position.

DH | N/A | DH

7.4 If the seat cushion adjusts fore-aft, independent of the seat back, use only the controls that primarily move the seat cushion in the fore-aft direction to move the **SCRP** to the rearmost position.

☐ *N/A* No independent fore-aft seat cushion adjustment

DH | N/A | DH

7.5 Use any part of any control, other than the parts just used for fore-aft positioning, to determine the range of angles of the **SCRL** and to set the **SCRL** at mid-angle. Record the maximum, minimum and midangles in the table below;

SCRL°	Max	Min	Mid
Driver Seat	24.5	14.5	19.5
Front Passenger Seat	25.4	16.0	20.7
Front Center Seat	N/A	N/A	N/A

DH | N/A | DH

7.6 If the seat and/or seat cushion height is adjustable, use any part of any control other than the parts which primarily move the seat or seat cushion fore-aft, to put the **SCRP** in its lowest position with the **SCRL** angle at the mid-angle found in 7.5.

☐ *N/A* No independent fore-aft seat cushion adjustment

DH | N/A | DH

7.7 Use only the controls that primarily move the seat in the fore-aft direction to verify the seat is in the rearmost position.

DH | N/A | DH

7.8 Use only the controls that primarily move the seat in the fore-aft direction to **mark** the fore-aft seat positions. **Mark** each position so that there is a visual indication when the seat is at a particular position. For manual seats, move the seat forward one detent at a time and **mark** each detent. For power seats, **mark** only the rearmost, middle, and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost.

DH | N/A | DH

7.9 Use only the controls that primarily move the seat in the fore-aft direction to move the **SCRP** to the rearmost position.

DH | N/A | DH

7.10 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find the maximum, minimum, and middle height of the **SCRP** with the **SCRL** at the mid-angle determined in 7.5 by measuring from the **SCRP** to a reference point on the floor pan or sill. Record the maximum, minimum and middle heights on the table below.

	N/A No independent fore-aft seat cushion adjustment

DH | N/A | DH

7.11 Use only the controls that primarily move the seat and/or seat cushion in the fore-aft direction to place the **SCRP** at the mid-fore-aft position.

DH | N/A | DH

7.12 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find the maximum, minimum, and middle height of the **SCRP** with the **SCRL** at the mid-angle determined in 7.5 by measuring from the **SCRP** to a reference point on the floor pan or sill. Record the maximum, minimum and middle heights on the table below.

DH | N/A | DH

7.13 Use only the controls that primarily move the seat in the fore-aft direction to place the **SCRP** at the full forward position.

DH | N/A | DH

7.14 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually **mark** the maximum, minimum, and middle height of the **SCRP** with the **SCRL** at the midangle determined in 7.5 by measuring from the **SCRP** to a reference point on the floor pan or sill. Record the maximum, minimum and middle heights and SCRL mid-angle on the table below.

Seat	SCRL Mid-Angle (7.5)	SCRP Height Position	SCRP Height (mm)		
			Rearmost (7.10)	Mid-fore/aft (7.12)	Full forward (7.14)
Driver Seat	19.5	Max	71.63	81.15	90.05
		Mid	37.50	46.96	56.03
		Min	3.20	12.59	21.94
Front Passenger Seat	20.7	Max	67.03	78.87	85.53
		Mid	35.21	46.94	53.68
		Min	3.37	15.22	21.92
Front Center Seat	N/A	Max	N/A		
		Mid	N/A		
		Min	N/A		

DH N/A DH

8. For adjustable seat backs, position the seat back at the foremost stop. Mark each position of adjustment from the foremost to rearmost stops so that there is a visual indication when the seat back is at a particular position.

For manually adjustable seat backs (with detents), move the seat back rearward one detent at a time and mark each detent. Label the rearmost, middle, and foremost positions with the measured detent. If no middle detent exists, label the next most-rearward detent to the middle position.

For power seat backs (no detents), move the seat back rearward one degree at a time and mark each angle. Angles should be measured at the location on the seat (head restraint, seat back, plastic trim, etc.) as indicated by the manufacturer on Form No. 1. Label the rearmost, middle, and foremost positions with the measured angle.

Record the range of angles in degrees and detents in the space provided below. Visually mark and label for future reference the rear seat back angle, if adjustable, as provided by the manufacturer on Form No. 1 for the 50th percentile (ES-2re) male dummy in a Side MDB test.

Seat	Total Seat Back Angle Range		Test Position from Most Upright	
	Degrees	Detents *	Degree	Detent *
Driver Seat w/ Seated Dummy	58.6	Powered	+18.6 NO ATD	Powered
Front Passenger Seat	58.6	Powered	+18.5 NO ATD	Powered
Front Center Seat	N/A	N/A	N/A	N/A

DH N/A DH 8. **Mark the seat belt upper anchorage positions**
Mark for reference each vertical position of a manually adjustable seat belt upper anchorage.

Mark and label each position with the following: H for highest, M"X" for mid-positions (where "X" stands for 1, 2, 3, etc. and 1 is used for the highest mid-position), and L for lowest.

☐ *N/A* No independent fore-aft seat cushion adjustment

DH 9. **Mark the steering wheel position**
Is the steering wheel adjustable up and down and/or in and out?

DH ☐ Yes, go to 9.1

☐ No - Check Sheet completed.

DH 9.1 Find and **mark** for future reference each up and down position. Label three of the positions with the following: H for highest, M for mid-position (if there is no mid-position, label the next lowest adjustment position), and L for lowest.

☐ N/A steering wheel is not adjustable up and down

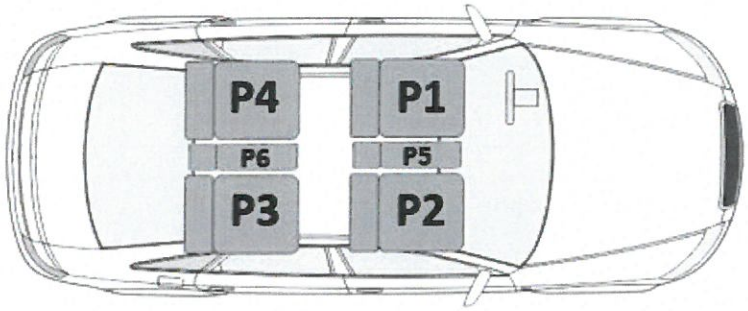
DH 9.2 Find and **mark** for future reference each -in- and -out- position. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the next rearmost adjustment position), and R for rearmost.

2nd Row Seat Positioning – Reference Marks:

Performed by:	David Hooper	Date:	11/16/2022

Tape Measure Unique Identifier:	400602
Inclinometer Unique Identifier:	401133

Instructions: In this section there are three sets of check marks. The first row corresponds with the rear struck side seat (left rear seat P4), the second row corresponds with the rear center seat (P6) and the third row corresponds with the rear outboard passenger seat (P3).



Setting the Seats - Driver, Front Center, and Front Passenger Seats
Set the driver, front center (if applicable), and front passenger seats accordingly:

Initial Settings ----------

Initial:

DH 1. **Determine the Seat Type**

Visually inspect the front seats to determine its type (i.e., bucket or bench).

Struck Side Rear Passenger Seat:	Bench DH	Bucket
Non-Struck Side Passenger Seat:	Bench DH	Bucket
Rear Center Seat:	Bench DH	Bucket

P4	P6	P3
N/A		

2. **Position lumbar supports**
Position the seat's adjustable lumbar supports to the lowest, retracted or deflated adjustment positions.

DH N/A, No lumbar adjustment

N/A

3. **Position additional supports**

Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position.

DH N/A, No additional support adjustment

N/A

4. **Position leg supports**

Position an additional leg support system in its rearmost position.

DH N/A, No additional support adjustment

DH DH DH

5.2.1. **Position head restraint** – Lowest Position As per FORM 1

Does the adjustable head restraint have a non-use position as defined by FMVSS No. 202a?

DH DH DH

Yes - Set the head restraint to the lowest position using the procedure described by the manufacturer. Go to step 6.

No – go to step 5.1.2

DH DH DH

N/A N/A N/A

5.1.2. Using any adjustment of the head restraint, position it to its lowest position.

5.1.3 Using any adjustment of the head restraint, position it to the full forward position. If it rotates, rotate it such that the head restraint extends as far forward as possible.

N/A – The test vehicle is equipped with automatically adjusting head restraints or there is no head restraint adjustment.

DH N/A N/A

6. **Mark the longitudinal centerline of the seat**

DH

6.1 Driver's seat:

If adjustable, place the seat back in its most vertical (upright) position. For bucket seats, locate and **mark** for reference the intersection of a vertical longitudinal plane that passes through the SgRP and the seat cushion upper surface, seat back and head restraint. For bench seats, draw a line along the intersection of a vertical longitudinal plane that passes through the centerline of the steering wheel and the seat cushion upper surface, seat back and head restraint.

7. **Mark the range of seat travel**
Prior to marking the seat, move the seat through its full range of motion using all available controls. Separately, operate each control to determine whether it moves the seat and/or seat cushion primarily in the fore-aft or up-down directions.

Seat Fore/Aft Positioning	Total Fore/Aft Travel	Placed in Position #
Struck Side Rear Seat	FIXED	
Non-Struck Side Rear Seat	FIXED	
Rear Center Seat	FIXED	

7.1 Mark a point (seat cushion reference point - **SCRP**) on the side of the seat cushion that is between 150 mm and 250 mm from the front edge of the seat cushion. For seat cushions that move up and down independently from the seat housing, mark the point on the side of the cushion in an area that will not be obscured by the seat housing when the seat cushion is at its lowest height position.

7.2 Draw a horizontal line (seat cushion reference line - **SCRL**) through the **SCRP**.

7.3 Use only the controls that primarily move the seat in the fore-aft direction to move the **SCRP** to the rearmost position.

7.4 If the seat cushion adjusts fore-aft, independent of the seat back, use only the controls that primarily move the seat cushion in the fore-aft direction to move the **SCRP** to the rearmost position.

☐ *N/A* No independent fore-aft seat cushion adjustment

7.5 Use any part of any control, other than the parts just used for fore-aft positioning, to determine the range of angles of the **SCRL** and to set the **SCRL** at mid-angle. Record the maximum, minimum and midangles in the table below;

SCRL°	Max	Min	Mid
Struck Side Rear Seat	FIXED		
Non-Struck Side Rear Seat	FIXED		
Rear Center Seat	FIXED		

7.6 If the seat and/or seat cushion height is adjustable, use any part of any control other than the parts which primarily move the seat or seat cushion fore-aft, to put the **SCRP** in its lowest position with the **SCRL** angle at the mid-angle found in 7.5.

☐ *N/A* No independent fore-aft seat cushion adjustment

7.7 Use only the controls that primarily move the seat in the fore-aft direction to verify the seat is in the rearmost position.

7.8 Use only the controls that primarily move the seat in the fore-aft direction to **mark** the fore-aft seat positions. **Mark** each position so that there is a visual indication when the seat is at a particular position. For manual seats, move the seat forward one detent at a time and **mark** each detent. For power seats, **mark** only the rearmost, middle, and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost.

7.9 Use only the controls that primarily move the seat in the fore-aft direction to move the **SCRP** to the rearmost position.

7.10 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find the maximum, minimum, and middle height of the **SCRP** with the **SCRL** at the mid-angle determined in 7.5 by measuring from the **SCRP** to a reference point on the floor pan or sill. Record the maximum, minimum and middle heights on the table below.

☐ *N/A* No independent fore-aft seat cushion adjustment

7.11 Use only the controls that primarily move the seat and/or seat cushion in the fore-aft direction to place the **SCRP** at the mid-fore-aft position.

7.12 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find the maximum, minimum, and middle height of the **SCRP** with the **SCRL** at the mid-angle determined in 7.5 by measuring from the **SCRP** to a reference point on the floor pan or sill. Record the maximum, minimum and middle heights on the table below.

7.13 Use only the controls that primarily move the seat in the fore-aft direction to place the **SCRP** at the full forward position.

7.14 Use any part of any control, other than the parts which primarily move the seat or seat cushion fore-aft, to find and visually **mark** the maximum, minimum, and middle height of the **SCRP** with the **SCRL** at the midangle determined in 7.5 by measuring from the **SCRP** to a reference point on the floor pan or sill. Record the maximum, minimum and middle heights and SCRL mid-angle on the table below.

Seat	SCRL Mid-Angle (7.5)	SCRP Height Position	SCRP Height (mm)		
			Rearmost (7.10)	Mid-fore/aft (7.12)	Full forward (7.14)
Struck Side Rear Seat	FIXED	Max	FIXED		
		Mid	FIXED		
		Min	FIXED		
Non-Struck Side Rear Seat	FIXED	Max	FIXED		
		Mid	FIXED		
		Min	FIXED		
Rear Center Seat	FIXED	Max	FIXED		
		Mid	FIXED		
		Min	FIXED		

8. For adjustable seat backs, position the seat back at the foremost stop. Mark each position of adjustment from the foremost to rearmost stops so that there is a visual indication when the seat back is at a particular position.

For manually adjustable seat backs (with detents), move the seat back rearward one detent at a time and mark each detent. Label the rearmost, middle, and foremost positions with the measured detent. If no middle detent exists, label the next most-rearward detent to the middle position.

For power seat backs (no detents), move the seat back rearward one degree at a time and mark each angle. Angles should be measured at the location on the seat (head restraint, seat back, plastic trim, etc.) as indicated by the manufacturer on Form No. 1. Label the rearmost, middle, and foremost positions with the measured angle.

Record the range of angles in degrees and detents in the space provided below. Visually mark and label for future reference the rear seat back angle, if adjustable, as provided by the manufacturer on Form No. 1 for the 5th percentile (SID-IIs) female dummy in a Side MDB test.

Seat	Total Seat Back Angle Range		Test Position from Most Upright	
	Degrees	Detents *	Degree	Detent *
Struck Side Rear Seat	FIXED			
Non-Struck Side Rear Seat	FIXED			
Rear Center Seat	FIXED			

N/A

9. **Mark the seat belt upper anchorage positions**
Mark for reference each vertical position of a manually adjustable seat belt upper anchorage.

Mark and label each position with the following: H for highest, M"X" for mid-positions (where "X" stands for 1, 2, 3, etc. and 1 is used for the highest mid-position), and L for lowest.

DH *N/A* No independent fore-aft seat cushion adjustment

DH 10. **Mark the steering wheel position**
Is the steering wheel adjustable up and down and/or in and out?

DH Yes, go to 9.1

No - Check Sheet completed.

DH 10.1 Find and **mark** for future reference each up and down position. Label three of the positions with the following: H for highest, M for mid-position (if there is no mid-position, label the next lowest adjustment position), and L for lowest.

N/A steering wheel is not adjustable up and down

DH 10.2 Find and **mark** for future reference each -in- and -out- position. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the next rearmost adjustment position), and R for rearmost.

H-Point Left Front Seat (Position 1):

Performed by:	David Hooper	Date:	11/16/2022

Initial:

DH Place a piece of muslin cloth over seat area.

DH Place H-point machine in center of seat. Note: If vehicle is a bench seat, then the center is aligned with the center of the steering column. For the passenger seat, the center is found by placing the machine the same distance outboard from the vehicle centerline as for the driver seat. If the seat is a bucket, place the H-point machine on the seat centerline.

DH Attach leg assemblies. T-bar parallel to ground and perpendicular to vehicle centerline. T-bar set at 15.8, legs set at 16.3 for 50th percentile.

DH Position right driver's foot on un-depressed accelerator pedal. Insert pin in right foot to ensure angle is not less than 87 degrees. Sole on pedal and heel as far forward as possible. Left knee is placed same distance from H-point machine centerline as right knee.

DH Position knees 254 mm apart. Place feet as far forward as possible.

DH Apply lower leg and thigh weights.

DH Tilt back pan forward. Pull T-bar forward then release to allow machine to slide back into seat.

DH Apply a 22 pound rearward load at the intersection of hip angle and T-bar. Apply load twice.

DH Return back plane to seat back.

DH Prevent H-point machine from sliding forward for the rest of the procedure.

DH Install buttock and torso weights.

DH Move back plane forward and rock 3 times over a 10 degree arc.

DH Lift each leg and allow it to fall into place. Make sure seat pan is level (i.e. no roll) and return back pan to seat back.

DH Apply force to the back pan to either: (1) Increase hip angle 3 degrees. (2) Maximum of 15 pounds.

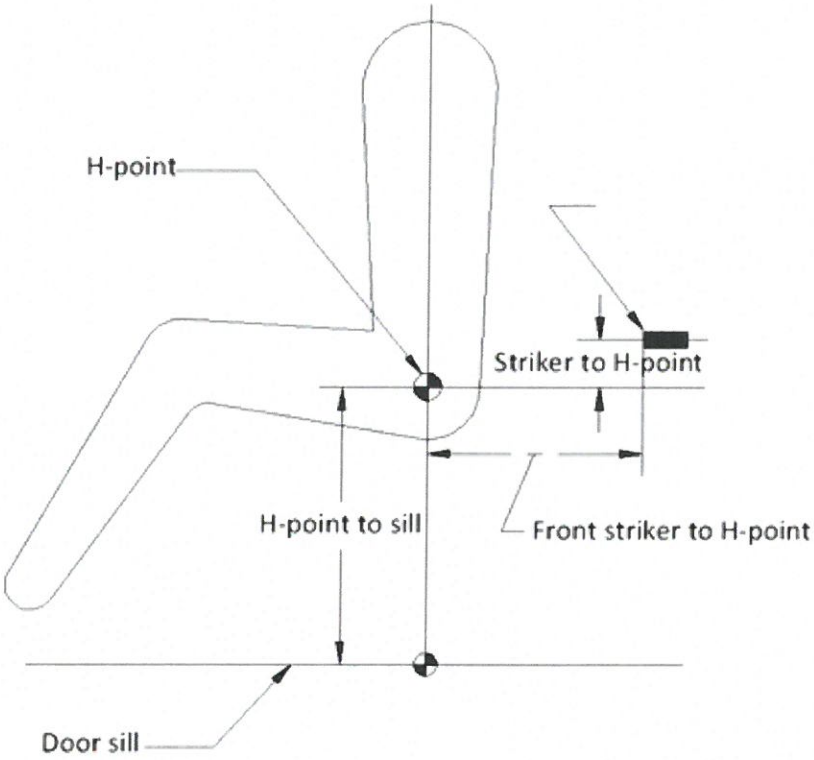
DH Record H-Point Machine Torso Angle in the space provided below.

DH Record H-Point Machine Hip Point location in the space provided below.

DH Place H-point target sticker on outside of vehicle door.

H-Point Machine Torso Angle		19.6	degrees
H-Point Machine Hip Angle		92	degrees
Seatback Angle (Headrest Post)		+18.6	degrees
Hip Point:	X (fore/aft of striker)	123.95	mm
	Z (above/below striker)	262.88	mm

CMM Point
O/B HRP
x = 1903.63
z = -607.64



1st Row Seat Positioning – Setting Seats

Performed by:	David Hooper	Date:	11/16/2022

Tape Measure Unique Identifier:	400602
Inclinometer Unique Identifier:	401133

Instructions: In this section there are three sets of check marks. The first row corresponds with the front driver seat (P1), the second row corresponds with the front center seat (P5) and the third row corresponds with the front passenger seat (P2).

Setting the Seats - Driver, Front Center, and Front Passenger Seats
Set the driver, front center (if applicable), and front passenger seats accordingly:

Initial: P1	P5	P2	
DH	N/A	DH	1. **Set the seat for a (ES-2re) test dummy** **Using the reference marks on the seat, set the seat in the mid fore-aft, lowest height at mid seat cushion angle position as follows;**
DH	N/A	DH	1.1 Using the control that primarily moves the seat fore and aft, move the **SCRP** to the mid-travel (i.e., mid-fore aft) position.
DH	N/A	DH	1.2 If the seat or seat cushion height is adjustable, other than by the controls that primarily move the seat or seat cushion fore and aft set the height of the **SCRP** to the minimum height, with the **SCRL** set as closely as possible to the mid-angle.
DH	N/A	DH	1.3 Set the seat back angle at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. If the position is not specified, set the seat back at the first detent rearward of 25° from vertical.

Seat Back Angle 18.6 ° (NO ATD)

☐ *N/A* The seat back does not adjust.

DH	N/A	DH	Using any adjustment of the head restraint, position it to its highest position. Using any adjustment of the head restraint, position it to the full forward position.

2nd Row Seat Positioning – Setting Seats

Performed by:	David Hooper	Date:	11/16/2022

Tape Measure Unique Identifier:	400602
Inclinometer Unique Identifier:	401133

Instructions: In this section there are three sets of check marks. The first row corresponds with the rear struck side seat (left rear seat P4), the second row corresponds with the rear center seat (P6) and the third row corresponds with the rear outboard passenger seat (P3).

Setting the Seats - Rear Struck Side Seat, Rear Center, and Rear Outboard Seats
Using the reference marks determined in the previous section, set the seats accordingly for a SID-IIs ATD:

Set the seat at rearmost fore/aft position, lowest height at mid-angle.

Initial:

P4	P6	P3
FIXED		
FIXED		
FIXED		

1.1 Using the control that primarily moves the seat fore and aft, move the **SCRP** to the rearmost position.

1.2 If the seat or seat cushion height is adjustable, other than by the controls that primarily move the seat or seat cushion fore and aft, set the height of the **SCRP** to the lowest height, with the **SCRL** set as closely as possible to the mid-angle.

☐ N/A The seat is not adjustable.

1.3 Fully recline the seat back

☐ *N/A* The seat back does not adjust.

Setting Steering Wheel & Seat Belt Adjustment

Performed by:	David Hooper	Date:	11/16/2022

Tape Measure Unique Identifier:	400602
Inclinometer Unique Identifier:	~~400~~ 401133 DH

Setting Steering Wheel, Seat Belt Anchorages, Belt Guides, etc.

Steering Wheel Adjustment - If the steering wheel is adjustable up and down and/or in and out complete the following steps to set the final steering wheel location:

Initial:

DH 11. **Set the steering wheel to the mid-position**

Use the markings to position the steering wheel hub at the geometric center of full range of driving positions including any telescoping positions or if applicable, the next lowest detent position. Complete the following table

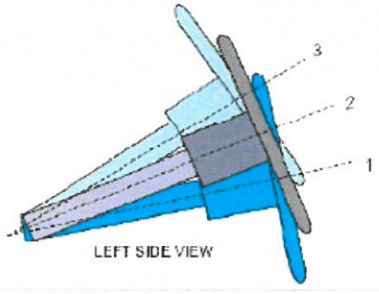
N/A steering wheel does not adjust.

Steering Column Adjustment

Steering wheel and column adjustments are made so that the steering wheel hub is at the center of its geometric locus it describes when it moves through its full range of motion.

	Degrees	Fore / Aft Position (mm)
Lowermost, Position No. 1	18.9	
Geometric Center, Position No. 2	21.6	
Uppermost, Position No. 3	24.2	
Telescoping Steering Wheel Travel		64
Test Position	21.6	32

Reference distance from ceiling to center of steering wheel. Mark point in ceiling.	390	mm
Reference distance from front of dash to steering wheel. Mark points on dash and steering wheel.	100	mm



Adjustable Seat Belt Anchorages

Initial:

EH Place adjustable seat belt anchorages in the nominal adjustment position in accordance with the manufacturer's data on Form No. 1 for a 50th percentile (ES-2re) male adult occupant and a 5th percentile (SID-IIs) female adult occupant.

Note the position of the seat belt anchorages in the space provided below.

	Total # of Positions	Placed in Position #
Driver Seat	~~Hot~~ H0-3	H0 - Highest
Rear Passenger Seat	N/A	N/A

N/A **Seat Belt Guides:** Usage of seat belt guides should be set in accordance with instructions included in the vehicle owner's manual or in Form No. 1.

Photographic Tape & Measurements

Performed by:	David Hooper	Date:	11/16/2022

Initial:

DH Align the left edge of 25 mm (1 inch) wide yellow/black checkerboard tape along the vertical impact reference line as defined below. Reference illustrations can be found on the next page.

For passenger vehicles

Test Vehicle Wheelbase Length	Vertical Impact Reference Line Location
Less than or equal to 2,896 mm	940 mm +/- 5 mm forward of wheelbase centerline
Greater than 2,896 mm	508 mm +/- 5 mm rearward of front axle centerline

Wheelbase = $\frac{LH + RH}{2}$

Wheelbase = $\frac{2630.29 + 2628.83}{2}$

Wheelbase = 2629.56mm

For multipurpose vehicles, sport utility vehicles, light trucks and vans:

Test Vehicle Wheelbase Length	Vertical Impact Reference Line Location
Less than or equal to 2,489 mm	305 mm +/- 5 mm rearward of front axle centerline
Greater than 2,489 mm but less than 2,896 mm	940 mm +/- 5 mm forward of wheelbase centerline
Greater than 2,896 mm	508 mm +/- 5 mm rearward of front axle centerline

Note: For different wheelbase versions of the same model vehicle, the vertical impact reference line may be determined by the following procedure:

- Select the shortest wheelbase version of the same model and locate the vertical impact reference line as described above.
- Measure the distance between the SgRP and the vertical impact reference line.
- Maintain the same distance between the seating reference point and the vertical impact reference line for the version being tested as that distance between the seating reference point and vertical impact reference line for the shortest wheelbase version.

DH Measure the distance from the front axle to the edge of the tape used to denote the vertical impact reference line and record the measurement in the space provided below.

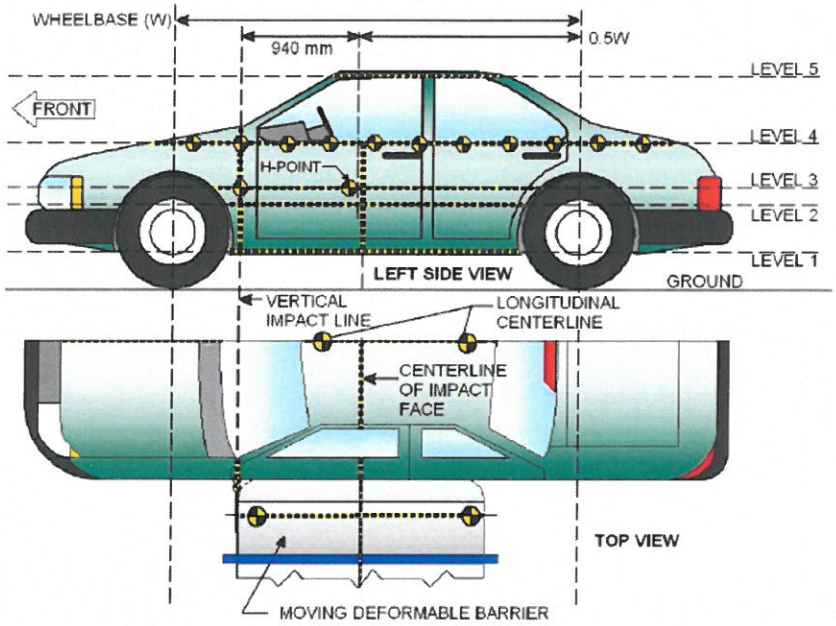
Impact Point Location:	Units	Value
Vehicle Wheel Base (As Measured)	mm	2629.56
Wheelbase Midpoint	mm	1314.78
Vertical Impact Reference Line Location (Taken from above table) *If Wheel Base is greater than 2,896 mm than use 508 mm*	mm	940
Vertical Impact Reference Line (Aft of Front Axle) (Intended Impact Point)	mm	374.78

Center of Barrier = LFWP - 374.78 - 838 = 3591.59 - 1212.78 = 2378.81

Tape Edge = 2378.81 - 12.5 = 2366.31

Place 25 mm (1 inch) wide yellow/black checkerboard tape shall be placed on the vehicle such that when the barrier is properly aligned with the test for impact, the tape coincides with the vertical centerline of the barrier's impact face. See below figures.

The tape should be extended across the roof of the vehicle (90˚ angle to the test vehicle longitudinal centerline) to provide a reference for the overhead camera coverage.



Affix 25 mm (1 inch) wide yellow/black checkerboard tape horizontally along the impact side of the test vehicle at LEVEL 1 – Top of side sill: Affix tape along the door sill from the front to the rear wheel-wells.

Affix 25 mm (1 inch) wide yellow/black checkerboard tape horizontally along the impact side of the test vehicle at LEVEL 2 – Occupant Hip Point: Project the location of the driver dummy's hip point laterally through the door to its exterior panel. Affix tape to the side body panels so that the tape intersects the hip point.

Affix 25 mm (1 inch) wide yellow/black checkerboard tape horizontally along the impact side of the test vehicle at LEVEL 3 – Mid-door: Measure the height of the front door body panel at two different locations that are at least 600 mm apart. Take the average of the two measurements. Mark this point on the exterior door panel. Affix tape to the side body panels so that the tape intersects this point.

Affix 25 mm (1 inch) wide yellow/black checkerboard tape horizontally along the impact side of the test vehicle at LEVEL 4 – Window sill: Affix tape just below the front door window sill.

Affix 25 mm (1 inch) wide yellow/black checkerboard tape horizontally along the impact side of the test vehicle at LEVEL 5 – Top of window: Affix tape just above the top of the front door window.

Note: The following measurements should be taken along the vertical impact reference line. Vehicle measurements forward of the vertical impact reference line are negative. All measurements are in millimeters (mm). Pre-test measurements are taken when the vehicle is in the "As Tested" weight condition. The crush profile grid is established prior to the test based on an estimated impact point.

Affix Targets to the Struck side of the Test Vehicle

Initial:

VH Place a 50 mm (2 inch) diameter target on the vehicle at mid-door height and along the left edge of the vertical impact reference line. The tip of the welding rod will be located in the center of the target.

DH Affix targets, labeled appropriately (if applicable) to the front door or side panel to denote the hip pivot center of the test driver dummy. Use a 100 mm (4 inch) diameter target and label with "HP".

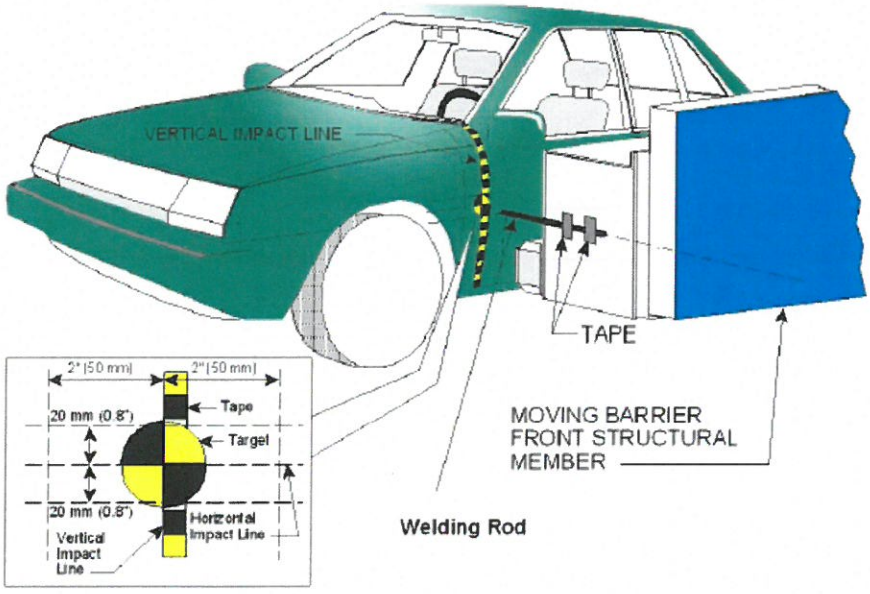
DH Affix targets, labeled appropriately (if applicable), along LEVEL 4, window sill tape line, at every 300 mm. Use 50 mm (2 inch) diameter targets.

N/A Affix 25 mm (1 inch) wide checkerboard tape on the hood and roof along the longitudinal centerline of the entire vehicle (excluding glazing surfaces).

DH Affix two (4-inch) diameter targets approximately 700mm apart on the roof's longitudinal centerline.

If the vehicle has a sunroof, no not affix any targets to any glazing. Maximize the distance between the targets assuring that the targets only lie on the roof's body panel.

Roof Target Dia. 101 mm 4" Distance between target centers: 700 mm



Pre-Test Measurements:

Performed by:	David Hooper / Drew Bagnski	Date:	11/16/2022

Instructions: Read through the following instruction PRIOR to measuring the following locations using the FARO arm.

Vehicle Coordinate System:

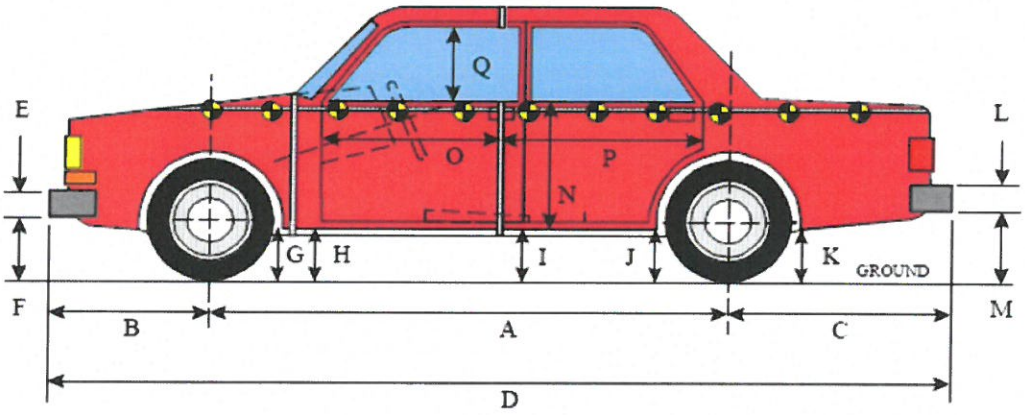
X – Rear Surface of Vehicle (+ forward)
Y – Vehicle Centerline (+ to right)
Z – Ground Plane (+ down)

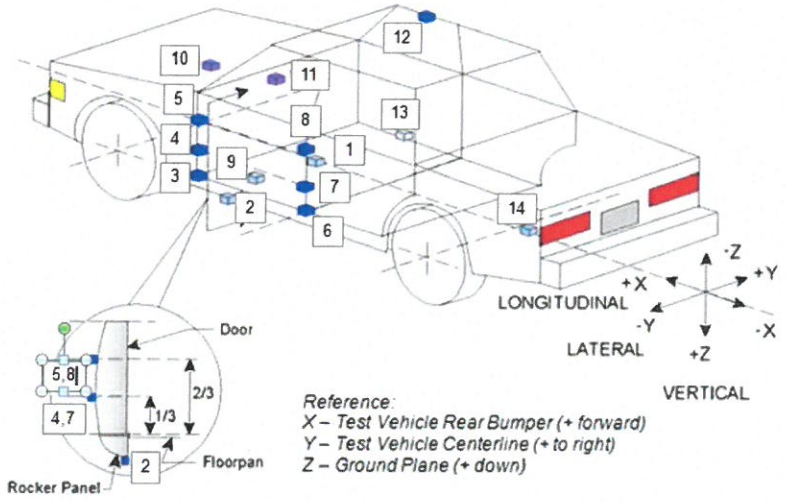
Exterior Vehicle Measurements:

FARO Unique Identifier:	#35912

Initial:

DH Review the below illustrations.





Initial:

DH Confirm vehicle is in the "As Tested" configuration.

DH Establish a fixed reference plane that is perpendicular to the vehicle's longitudinal centerline.

Ground Plane Reference Points ----------

Initial:

DB Gplane - Ground Plane Reference Points Left, Front, Right and Rear.

Wheelbase / Vehicle Length ----------

Initial:

DB LFW - Left Front Wheel.

DB LRW - Left Rear Wheel.

DB RFW - Right Front Wheel.

DB RRW - Right Rear Wheel.

DH RFRONT - Right Front (X19)

DH CFRONT - Center of Front (X1)

DH LFRONT - Left Front (X20)

DH RREAR - Right Rear

DH CREAR - Center of Rear

DH LREAR - Left Rear

DH NUP - N Upper Point

DH NLOW - N Lower Point

DH OFRNT - O Front Point

DH OPMID - O Rear Point / P Front Point

DH PREAR - P Rear Point

DH QUP - Front Window Opening – Take uppermost point on front window to obtain window vertical distance measurement

DH QLOW – Front Window Opening – Take lowermost point on front window to obtain window vertical distance movement

DH RBPW - Right B Pillar Point *(Taken at vertical tangency point)*

DH LBPW - Left B Pillar Point *(Taken at vertical tangency point)*

Vehicle Floor Pan Measurements / P1 Floor Pan / Interior ----------
Initial:

DH P1 STRIKER – Center of P1 Striker Bolt

Vehicle Floor Pan Measurements / P2 Floor Pan / Interior ----------
Initial:

DH P2 STRIKER – Center of P2 Striker Bolt

Crush Measurements (Previously Taken in Vehicle & Photographic Targets Section)----------

Initial:

DH C1 - Vehicle Crush Measurement #1 – Sill Top

DH C2 - Vehicle Crush Measurement #2 – Occupant Hip Point

DH C3 - Vehicle Crush Measurement #3 – Mid Door

DH C4 - Vehicle Crush Measurement #4 – Window Sill

DH C5 - Vehicle Crush Measurement #5 – Window Top

Accelerometer Measurements----------

Initial:

DH ACC 1 – Right Front Sill

DH ACC 2 – Right Rear Sill

DH ACC 3 – Rear Floor Pan

DH ACC 4 – Left Rear Sill

DH ACC 5 – Left Front Sill

DH ACC 6 – Right Rear Occupant Compartment

DH ACC 7 – Left B-Pillar Low

DH ACC 8 – Left B-Pillar Mid

DH ACC 9 – Left A-Pillar Low

DH ACC 10 – Left A-Pillar Middle

DH ACC 11 – Front Seat Track

DH ACC 12 – Rear Seat Track

DH ACC 13 – Vehicle CG

Hand Measurements----------

Initial:

VH	Hand measure	E	Front Bumper Thickness - *(The vertical height of the front bumper fascia)*	138 mm
VH	Hand measure	F	Front Bumper Bottom to Ground - *(Vertical distance from ground to the bottom of the front bumper fascia)*	403 mm
VH	Hand measure	G	Sill Height at Front Wheel Well - *(Vertical distance from ground to the sill at the front wheel well opening)*	200 mm
VH	Hand measure	H	Sill Height at Front Door Leading Edge -*(Vertical distance from ground to the sill at the front door seam)*	208 mm
VH	Hand measure	I	Sill Height at B-Pillar - *(Vertical distance from ground to the sill in line with the front door striker or B-pillar if no striker exists)*	214 mm
VH	Hand measure	J1	Sill Height at Rear Wheel Well - *(Vertical distance from ground to the sill at the rear wheel well opening)*	215 mm
VH	Hand measure	J2	Pinch Weld Height at Rear Wheel Well - *(Vertical distance from ground to the pinch weld at the rear wheel well opening)*	190 mm
VH	Hand measure	K	Sill Height Aft of Rear Wheel Well - *(Vertical distance from ground to the vehicle sheet body at the rear of the rear tire's wheel well)*	221 mm
VH	Hand measure	L	Thickness or height of rear bumper at center.	191 mm
VH	Hand measure	M	Distance from bottom of bumper to ground at center.	385 mm
Tape Measure Unique Identifier Used to conduct measurements				—

Initial:
DH Record the following information below (needed to generate the QuickLook).

Wheelbase Left Side	2630.29 mm
Wheelbase Right Side	2628.83 mm
Vehicle Width at B-Pillar	1790.34 mm
Vehicle Length Left Side	4406.87 mm
Vehicle Length Center	4501.68 mm
Vehicle Length Right Side	4409.87 mm

Section
5

Vehicle Instrumentation

Instrumentation Installation:

Performed by: Will Brock Date: 11-16-22

Note: It is the Technician's responsibility to verify that all instrumentation and associated wiring is in good working condition and calibrated.

Initial:

WB Review the customer's test request or statement of work for the list of desired instrumentation.

WB Create Calspan Excel channel request.

WB Generate photo placards.

WB Verify that the placards match the desired instrumentation list.

WB Print and cut out photo placards.

WB Acquire instrumentation, verify functionality, that it has been calibrated and that its calibration has not expired or is within two weeks of needing to be calibrated.

WB Install instrumentation in the following locations using two-face tape, hot melt or screws as appropriate. Use single accelerometers that have been pre-assembled as dual or tri-packs as appropriate). Then take a close-up photo of the installed instrumentation and corresponding photo placard followed by an overall photo. See Figure 5 below for vehicle accelerometer locations.

Install	Photo Close	Photo Overall	
☑	☑	☑	*Right Sill @ Front Seat* – Triaxial accelerometer mounted on the opposite side to the impacted side sill at the front seat to provide Ax, Ay and Az data: ACC 1 – Location 1.
☑	☑	☑	*Right Sill @ Rear Seat* – Triaxial accelerometer mounted on the opposite side to the impacted side sill at the rear seat to provide Ax, Ay and Az data: ACC 2 – Location 2.
☑	☑	☑	*Rear Floor Pan Above Axle* – Triaxial accelerometer mounted on the rear floor pan above the axle to provide Ax, Ay and Az data: ACC 3 - Location 3.
☑	☑	☑	*Left Sill @ Rear Door* – Uniaxial accelerometer mounted on the impacted side sill in line longitudinally with the center of the widest portion of the front door and located under the sill inward of pinch welds to provide Ay data: ACC 4 – Location 4.
☑	☑	☑	*Left Sill @ Front Door* – Uniaxial accelerometer mounted on the impacted side sill in line longitudinally with the center of the widest portion of the rear door and located under the sill inward of pinch welds to provide Ay data: ACC 5 – Location 5.

Right Rear Occupant Compartment – Uniaxial accelerometer mounted in the rear occupant compartment to provide Ay data: ACC 6 – Location 6.

Left B-Post Lower – Uniaxial accelerometer mounted on the impacted lower B-Pillar (located 1/3 the distance from the floor to the bottom of the door's window opening) to provide Ay data: ACC 7 – Location 7.

Left B-Post Middle – Uniaxial accelerometer mounted on the impacted middle A-Pillar (located 2/3 the distance from the floor to the bottom of the doors window opening) to provide Ay data: ACC 8 – Location 8.

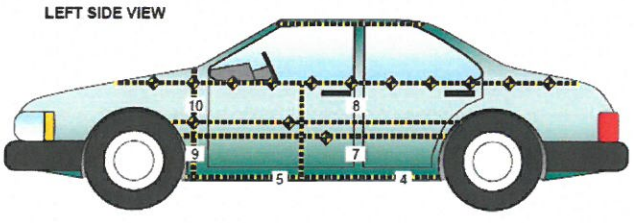
Left A-Post Lower – Uniaxial accelerometer mounted on the impacted lower A-Pillar (located 1/3 the distance from the floor to the bottom of the doors window opening) to provide Ay data: ACC 9 – Location 9.

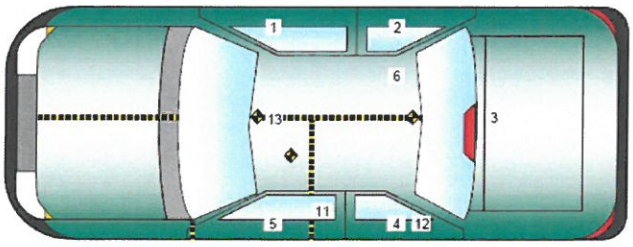
Left A-Post Middle – Uniaxial accelerometer mounted on the impacted middle A-Pillar (located 2/3 the distance from the floor to the bottom of the doors window opening) to provide Ay data: ACC 10 – Location 10.

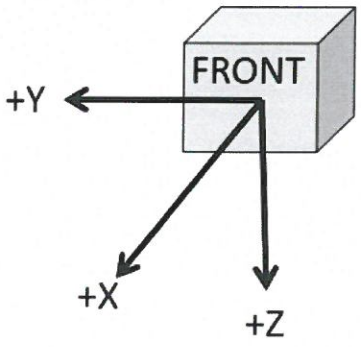
Front Seat Track – Uniaxial accelerometer mounted on the front seat track nearest the impacted door and approximately aligned with the driver hip point to provide Ay data: ACC 11 – Location 11.

Rear Seat Track or Structure – Uniaxial accelerometer mounted on the rear seat structure (if easily accessible) nearest the impacted door and approximately aligned with the dummy's hip pivot point to provide Ay data: ACC 12 – Location 12.

Vehicle CG – One triaxial accelerometer mounted to the floorpan at the longitudinal and lateral location of the vehicle CG to measure accelerations in the x, y, and z directions: ACC 13 - Location 13.







Onboard Test Equipment Installation:

Performed by:	Kyle + Tom	Date:	11/22/22

Note: It is the Technician's responsibility to verify that all instrumentation and associated wiring is in good working condition and calibrated. Verify that all DAU's calibration has not expired. This section MUST be completed prior to installation to prevent unnecessary delays.

Initial:

VH Inspect cables for damage prior to installation.

VH When installing any instrumentation cables, leave slack for strain relief.

TE+Kyle Connect 4 DAU's in series with crash link cables, starting with breakout box.

TC Plug in all accelerometer LEMO connectors into DAU's, ensuring a tight fit. Verify lock engaged.

✓ Plug in battery monitor cable, ensuring a tight fit. Verify lock engaged.

✓ Connect 2 trigger BNC connectors into breakout box.

✓ Connect WIFI to Ki-Hub interface.

✓ Connect abort to breakout box power wire.

✓ Connect LED light LEMO connector to battery box.

TB Connect trigger 1 port to camera in port using corresponding cable.

VH Check functionality of SRS light.

Section 6

Verification of Vehicle, ATD & Facility Readiness

Instruction: Insert ATD and Facility checklists after this tab.

- [x] Inserted ATD Checklist.
- [ ] Inserted Facility Checklist.
- [x] Inserted MDB Checklist.

Weight – As Tested Condition:

Performed by:	Luke C + Jeff W	Date:	11-21-22

Initial:

LC JW Load the appropriate dummies (with umbilical cord) into the appropriate seating position.
(Ask ATD Lab for specific ATD Weight)

✓ Reference weight: Driver 178.6 lbs.

✓ Reference weight: Left Rear Passenger 110.2 lbs.

LC JW Weigh the vehicle at each wheel and add the weights to determine the "As Tested" weight.

LC Record the weight measurements and scale unique identifier in the space provided below.

LC Verify that the "As Tested" weight is within the Target Test Weight (min) and Target Test Weight (max) determined in the Weight – As Delivered section.

Note: Adjust the weight of the test vehicle by either adding ballast or removing vehicle components in accordance with the manufacturer's data provided by the COTR on Form No. 1. If the calculated Test Vehicle Target Weight is exceeded immediately contact the Technical Director.

LC Record the weight of any added ballast in the space provided on the next page.

N/A Record any vehicle components that were removed and their associated total weight in the space provided on the next page.

LC Check to make sure the "As Tested" weight is similar to the "Fully Loaded" weight distribution

LC Record the Unique Identifier of the weight scales used to weigh the vehicle in the box below.

Weight Scales Unique Identifier	400323

		As Tested		
	Units	Front Axle	Rear Axle	Total
Left	kg	494	367	W_{Left} = 861
Right	kg	477	345	W_{Right} = 822
Ratio	%	57.7 %	42.3 %	
Totals	kg	W_F = 971	W_R = 712	1683

Target Test Weight Minimum	1682.8	kg
Target Test Weight Maximum	1687.3	kg

Weight of ballast added to meet TVTW

Description	Weight
Ballast	N/A kg

Yes	No	
X		Does the measured As Tested Vehicle Weight lie within the required weight range (i.e. Calculated Test Vehicle Weight -4.5 kg to -9.0 kg)?

If no, indicate in the space provided below the equipment that was removed and its associated weight to meet this requirement.

Equipment that was removed to meet test weight:

N/A

Explanation for equipment removal: [2]

N/A

Vehicle components removed to meet TVTW

Description	Weight
N/A	kg
	kg
	kg

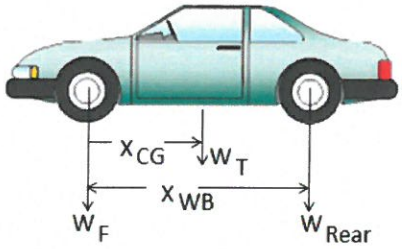
CG – As Tested Condition:

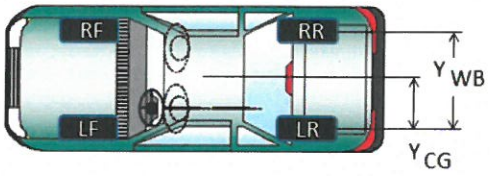
Performed by:	QP	Date:	11/22

Initial: QP

Measure and record the vehicle distances and copy the weights from the previous section in the space provided below in order to calculate the vehicle CG aft of the front axle and left (+) / right (-) from the longitudinal centerline.

Center of Gravity Calculation:





$$X_{CG\ (From\ Front\ Axle)} = \frac{X_{WB} \times W_{Rear}}{W_{Total}} \qquad Y_{CG\ (From\ Left\ Wheel\ Centerline)} = \frac{Y_{WB} \times W_{Right}}{W_{Total}}$$

X_{CG} = X_{WB} X W_{Rear}

1113 mm = 2630 mm X 712 kg / 1683 kg

W_{Total}

Y_{CG} = Y_{WB} X W_{Right}

1518 mm / 2 = 741

1518 mm (X 822) kg / 1683 kg

W_{Total}

Test Vehicle Center of Gravity (CG)	Units	As Tested	
Vehicle CG (Aft of Front Axle)	mm	1113	X_{CG}
Vehicle CG (Left (+) / Right (-) from Longitudinal Centerline)	mm	18	Y_{CG}

Vehicle Verification:

Engineer's Name:	QP	Date:	11/29

Complete the following steps before transporting the vehicle to the Crash Hall.

Initial:

QP Review and verify that all prior sections of this workbook have been completed.

VH Review all Pre-Test photos for content, field of view, clarity and exposure.

QP Conduct a visual inspection of the vehicle to verify that it has been properly prepared. Note: For OEM's verify that the vehicle reflects the customer's statement of work or test request.

QP Verify that the SRS light is not illuminated.

QP Verify Non-struck side airbags have been disabled.

QP Verify battery voltage is sufficient without charger – Wait 1 minute.

- QP 12 Volt or HEV State of Charge

QP Verify that the vehicle has the proper instrumentation.

QP Verify that ATD is ready and have the proper instrumentation. Verify tilt sensor is installed in ES-2re.

N/A Electric vehicle SOC check.

QP Verify that placards have been placed on vehicle and contain up-to-date information.

- QP Affix large placards to vehicle.
- QP Verify that small photograph placards are in test binder with vehicle.

Install Honeycomb

Performed by:	TP	Date:	11/21

Instructions: Read through the following instruction PRIOR to measuring the following locations. See reference images on next page.

Exterior MDB Measurements:

The maximum static crush of the MDB's honeycomb face shall be measured pre-test in the longitudinal direction at the following vertical installation height locations (see **Figure 14 Below**):

(1) Center of Bumper Level = **432 mm** above ground level

(2) Top of Bumper Level = **533 mm** above ground level

(3) Mid Level = **686 mm** above ground level

(4) Top-Stack Level = **813 mm** above ground level

Pre-test measurements are taken (from a reference plane perpendicular to and 1,000 mm from the MDB's longitudinal centerline) across the barrier face at 100 mm intervals at each of the four levels specified.

Initial:

TP Take Level 1 measurements every 100 mm (i.e. L1 800ROC to L1 800LOC) – Center of Bumper Level

TP Take Level 2 measurements every 100 mm (i.e. L2 800ROC to L2 800LOC) – Top of Bumper Level

TP Take Level 3 measurements every 100 mm (i.e. L3 800ROC to L3 800LOC) – Mid Level

TP Take Level 4 measurements every 100 mm (i.e. L4 800ROC to L4 800LOC) – Top-Stack Level

MDB Photographic Targets and Tape:

Performed by:	VH	Date:	11/21

See reference images on next page.

Initial:

VH Place 25 mm (1 inch) wide yellow/black checkerboard tape along the top of the honeycomb barrier face centerline.

VH Place 25 mm (1 inch) wide yellow/black checkerboard tape along front of the honeycomb barrier face centerline.

VH Place 25 mm (1 inch) wide yellow/black checkerboard tape along the top of the left edge of the honeycomb barrier face, to align with the vertical impact reference line of the test vehicle.

VH Place 25 mm (1 inch) wide yellow/black checkerboard tape along the front of the left edge of the honeycomb barrier face, to align with the vertical impact reference line of the test vehicle.

VH Place two [102 mm diameter (4")] targets on top of the barrier face 400 mm from the barrier centerline.

VH Verify [102 mm diameter (4")] photographic target on the MDB at the rear cross member accelerometer location on the left side of the frame.

VH Verify CG marker and other known location markers are visible and labeled on the MDB in the overhead view.

Align Vehicle & MDB

Performed by:	QP	Date:	1/20

Initial:

QP Transport vehicle to South Crash Hall and attach battery charger.

QP Place placards on vehicle.

VH Verify that vehicle's tire pressures match the tire pressures listed on the tire placard. If a tire is low, add air and notify Test Engineer.

Tire Pressures	Units	LF	RF	LR	RR
As Tested	kpa	280	280	260	260

Initial:

VH Position vehicle on the side impact pad along 27 degree line and align with MDB.

Note: When the MDB is properly positioned such that it is contacting the vehicle at the initial point of contact along struck side of the vehicle, strike a plane perpendicular to the ground that is coincident with the MDB impact face and is parallel to the vehicle's longitudinal centerline. Accordingly, this plane should form an angle of 63 degrees (± 0.5 degrees) with the direction of forward motion of the MDB.

QP Mark the floor at this location. This line should extend past the front and rear of the vehicle when it is properly positioned.

VH Hold vehicle in place with parking brake.

QP Place automatic transmission in NEUTRAL, manual in SECOND gear

QP Check if vehicle attitudes fall into test range. (If attitude is lower than fully loaded condition, vehicle wheels may need to be momentarily lifted off ground)

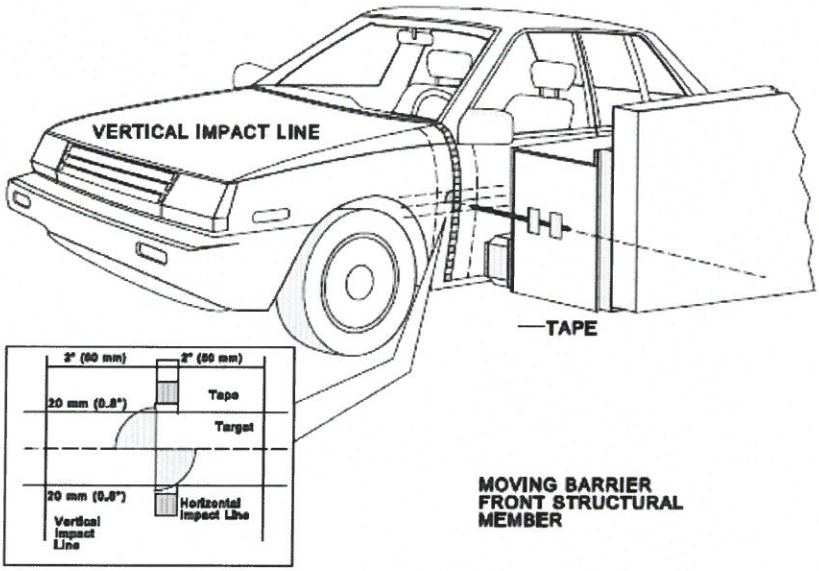
QP Attach plumb bobs to center of front and rear vehicle bumpers.

QP Mark cement beneath vehicle plumb bobs

QP Re-attach battery charger to vehicle.

VH Attach sharpened welding rod along the left side vertical surface of the honeycomb barrier in the horizontal plane level with the mid-door of the test vehicle (Level 3 target). Welding rod shall be positioned and attached with duct tape so as to contact the test vehicle body sheet metal during pre-test setup when MDB is positioned against the side of the test vehicle. The tip should be located in the center of the target.

Continued on next page.



Initial:

QP Place inch tape on barrier sides at H-point level

QP Measure and record the vertical height of level 3 impact targets

Left Side: 470 mm

AK Check speed trap and barrier release distance

VH Locate camera trigger on floor

VH Confirm welding rod will not contact trigger first.

VH Inspect and take the necessary steps so that the Crash Hall is neat, clean, and arranged in an orderly manner.

Section
7

High Speed Camera Set-Up

Camera Set-up:

Performed by:	TB	Date:	11/22/2022

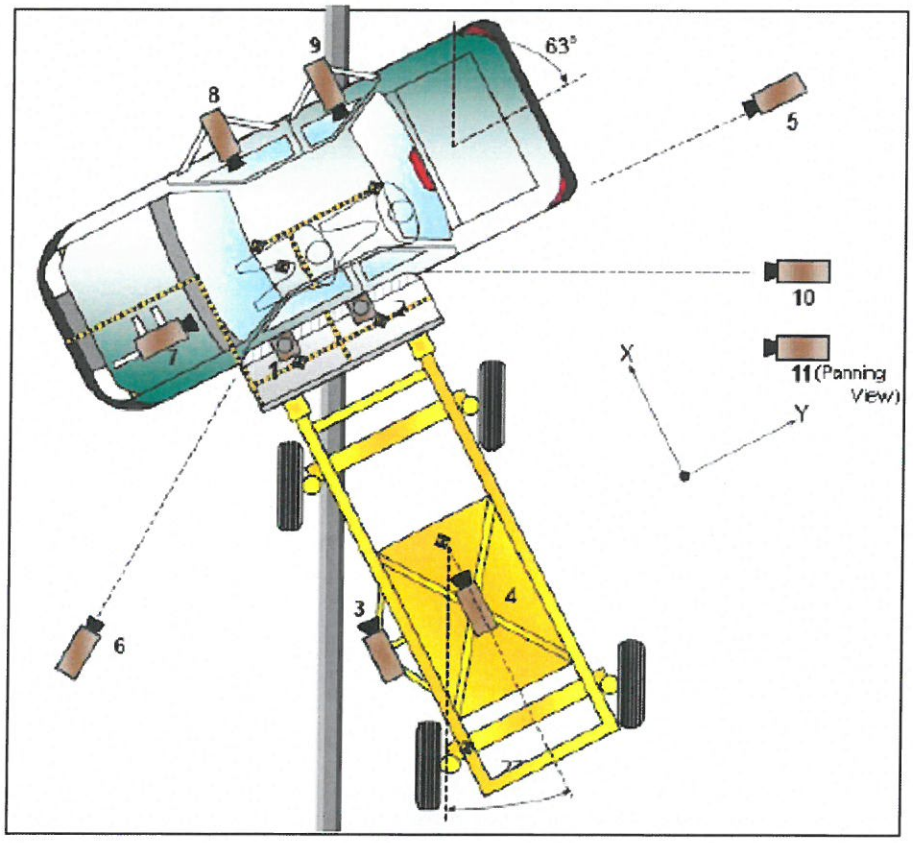
General Requirements:
High-speed digital cameras that operate at a minimum speed of 1000 frames per second (fps) for at least 10 ms before the vehicle contacts the barrier and for at least 300 ms after the vehicle contacts the barrier.

Glare or lights showing on any glass area (closed windows or vents) must be minimized so that views of the dummies during the test are visible for video analysis.

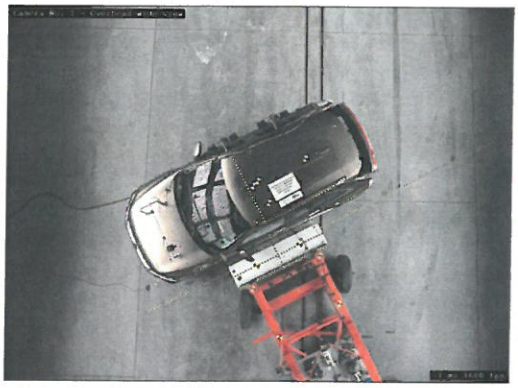
A time zero (T(0)) impact event marker (flash or strobe unit) to indicate when the test vehicle contacts the barrier must be present in each high speed video camera view.

The test laboratory's name or logo shall not appear in any high-speed videos. Note that for the real time, the test laboratory's name shall only appear in the documentary real-time video as part of the title frame.

Locate the following cameras and set field of view:



Camera 1: Overhead Wide View: High-Speed overhead camera to view target vehicle dynamics and positioned directly above the impact plane between the target vehicle and the MDB.



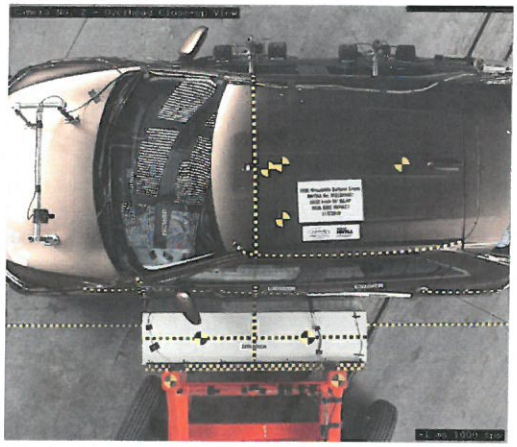
TB Establish field of view (FOV); start w/ **12.5** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1018-1004

Camera 2: Overhead Close-Up View: A high-speed overhead camera to provide close-up view of the impact plane (should include view of photograph targets on centerline of test vehicle and photograph targets on top of MDB barrier face) and positioned adjacent to Camera No.1.



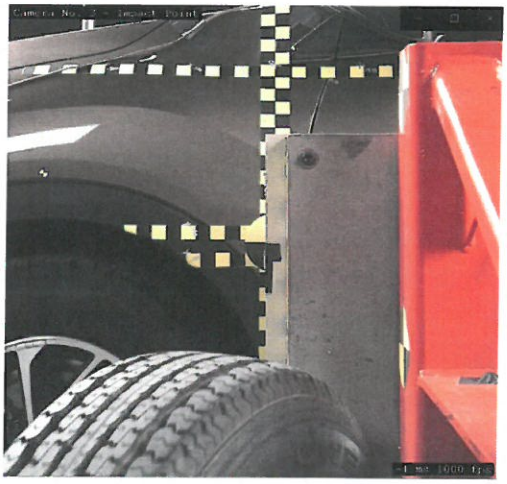
TB Establish field of view (FOV); start w/ **24** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1018-1000

Camera 3: Impact Point: A high-speed digital camera positioned along the impactor's face left vertical edge to cover target vehicle impact point during side impact event. The initial contact between the tip of the welding rod and test vehicle
Shall be recorded by Camera No. 3.



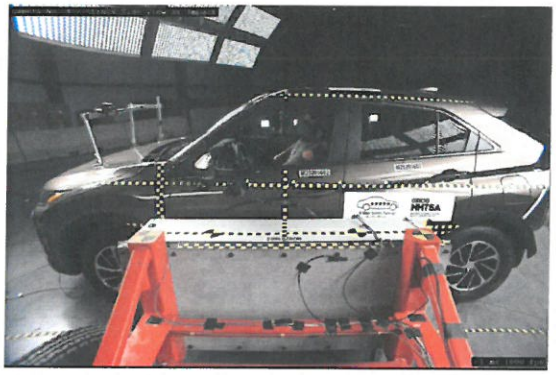
TB Establish field of view (FOV); start w/ **25** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1217-0053

Camera 4: Struck-Side View at Impact: A high-speed digital camera, positioned on MDB's centerline to view struck side of test vehicle during the side impact event.



TB Establish field of view (FOV); start w/ **8** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1018-0996

Camera 5: Rear Impact View of Struck Side: A high-speed right side view camera to cover both the MDB and the target vehicle during the side impact event.

TB Establish field of view (FOV); start w/ **28** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1018-0994

Camera 6: Front Oblique Impact View of Struck Side: A high-speed left side view camera to cover the motion of the target vehicle after impact.

TB Establish field of view (FOV); start w/ **24** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1118-1035

Camera 7: Driver Dummy Front View (Onboard): A high-speed camera to provide front view of the front dummy through the vehicles windshield from above the engine compartment. (Should be sufficiently raised above the hood structure and positioned such that it shows not only curtain air bag deployment in relation to the dummy's head, but also torso air bag deployment in relation to the dummy's chest, if applicable.)

TB Establish field of view (FOV); start w/ **25** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1118-1032

TB Verify all mounts and piping have been pinned and secured.

Camera 8: Driver Dummy Side View (Onboard): A high-speed camera to view across the test vehicle's occupant compartment to record the lateral motion of the front dummy during and after side impact.

TB Establish field of view (FOV); start w/ **12.5** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1018-1011

TB Verify all mounts and piping have been pinned and secured.

Camera 9: Rear Passenger Dummy Side View (Onboard): A high-speed camera to view across the test vehicle's occupant compartment to record the lateral motion of the rear dummy during and after side impact.

TB Establish field of view (FOV); start w/ **12.5** mm lens.

TB Confirm placards & strobe are in FOV.

TB Focus camera

TB Record Camera's Unique Identifier: 10-1018-1029

TB Verify all mounts and piping have been pinned and secured.

Camera 11: Real-Time Pan View of Impact: Real-time (24-30 fps) camera to provide the following pre-test, test, and post-test coverage.

TB Establish field of view (FOV).

TB Confirm placards & strobe are in FOV.

TB Focus camera (Focus on ATD's and not placards)

TB Record Camera's Unique Identifier: Panasonic 7

Camera Location - Data Sheet:

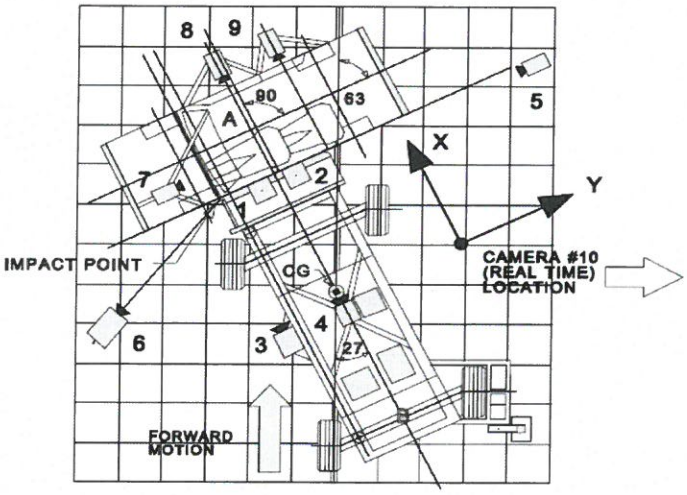
Performed by: TB Date: 11/22/2022

Camera Locations:

No.	Camera View	Location X (mm)	Location Y (mm)	Location Z (mm)	Lens (mm)	Operating Frame Rate
1	Overhead Overall	0	-390	-8230	12.5	1000
2	Overhead Close-Up	0	0	-8380	24	1000
3	Impact Point Close-up (MDB)				25	1000
4	Centerline of Impact (MDB)				8	1000
5	Right Side View	-3235	-5482	-1419	24	1000
6	Left Side View	0	8771	-1540	24	1000
7	Front Seat Occupant – Frontal View (OB)				25	1000
8	Front Seat Occupant – Side View (OB)				8	1000
9	Rear Passenger – Side View (OB)				8	1000
10	Real Time Coverage				Zoom	30
	Measuring Device Unique Identifier:	Fluke 400 618				

*COORDINATES

Specifically, the X and Y coordinates shall reference the designated impact point on the target vehicle's struck side and the Z coordinate shall reference the ground (+X = forward of impact, +Y = right of impact, +Z = Down). The coordinate system shall be aligned with the test vehicle's struck side.



Camera Control Software

Performed by:	TB	Date:	11/22/2022

Instructions: Verify the following software settings and functions are correct

Initial:

TB Appropriate software exposure settings (determined during exposure setup with overhead lights on)

TB Color balance and check corrections (performed during exposure setup with overhead lights on)

TB Pre and post-trigger recorded frames – minimum 10 pre-trigger, 300 post-trigger

TB Record mode is 'circular', trigger configuration is 'SWC'

TB Trigger checks are performed and all cameras trigger properly

TB Auto download is activated and set to download to correct file path on control PC

TB After all configuration settings are set, camera configuration is saved

TB Download to SD card on camera

Section 8

Test Set-up & Execution

Data Acquisition Software Setup:

Performed by:	Tom Eberhardt	Date:	11/22/22

Initial:

TES Verify signals from critical channels are operational and reasonable BEFORE installing ATD.

Yes	No	
	MA	Verify firing of airbag(s) with customer, or monitoring and confirm timing pretensions.

TE Load the Crash Test Plan.

TE Verify Test Plan has been reviewed by process engineer and customer.

Process Engineer Approval:	AK	Date:	11/22/22

TE Place copy of Test Plan after this page for reference.

TE Verify dummies are attached to data acquisition boxes and are grounded.

TE Verify crash link cables are installed.

TE Verify communication cables are attached to the vehicle.

TE Verify wireless box is communicating with DAU's

TE Verify KT interface shows 30-36 volts at the vehicle.

TES

Record Vehicle 1 Voltage 12.2V Record Vehicle 2 Voltage: N/A

TE Verify KT data channels CAC's and polarities.

TE Add the ES-2re, SID-IIs, Vehicle, and Mobile Deformable Barrier assemblies to the Signals tab.

TE Verify vehicle is communicating with DAU's.

TE Verify mobile deformable barrier is communicating with DAU's.

TE Select Auto-ID from the Signals tab and verify there are no transducers identified.

TE Perform electrical check on Signals tab and verify there are no errors.
Record Number of Channels: 70

TE Perform electrical check on Samplers tab and verify there are no errors.

TES Record Vehicle DAU Serial Numbers: SPE592 SPE355 SPE352

TE Record Mobile Deformable Barrier DAU Serial Number: N/A

TE Perform electrical check on Triggers tab to test the trigger and verify there are no errors.

NA Tie down umbilicals and verify adequate cable slack.

Pre-Test Photos & Video Prior to Seating:

Performed by:	JH	Date:	

Note: Clear and properly focused digital still photographs in .jpg format with a minimum dots-per-inch (DPI) of 180 shall be taken. A vehicle information placard placed parallel with the camera, identifying the test vehicle model as well as the barrier and NHTSA number, along with an indication of whether the photo was taken pre-test shall appear in each photograph and be legible. All photographs must be in landscape view / orientation. Glare or light from any illuminated or reflective surface shall be minimized while taking photographs. Reference sample photo set.

Initial: **Video of MDB:**

JH Overhead View of MDB

Initial: **Photos of Vehicle against Barrier:**

JH No. 15 – Pretest Overhead View of MDB Positioned Against Impact Side of Test Vehicle at Impact Location.

JH Move MDB back from vehicle and then take below photos and real time video.

Initial: **Photos of MDB:**

JH No. 7 – Pretest Frontal View of Impactor Face

JH No. 13 – Pretest Top View of Impactor Face

JH No. 9 – Pretest Left Side View of Impactor Face

JH No. 11 – Pretest Right Side View of Impactor Face

Initial: **Vehicle Surrounds**

JH No. 1 – Pretest Frontal View of Test Vehicle

JH No. 5 – Pretest Impacted Side View of Test Vehicle

JH No. 3 – Pretest Rear View of Test Vehicle

Initial:

MH Move MDB to start position, attach tow and abort cables and check onboard abort.

Positioning SID-IIs in Rear Left Position:

Performed by:	VH	Date:	11/22

Initial:

Fixed 1. **Set the seat at rearmost fore/aft position, lowest height at mid-angle**

Fixed 1.1 Using the control that primarily moves the seat fore and aft, move the **SCRP** to the rearmost position.

Fixed 1.2 If the seat or seat cushion height is adjustable, other than by the controls that primarily move the seat or seat cushion fore and aft, set the height of the **SCRP** to the lowest height, with the **SCRL** set as closely as possible to the mid-angle.

VH N/A The seat is not adjustable.

Fixed 1.3 Fully recline the seat back

VH *N/A* The seat back does not adjust.

VH **3. Place the test dummy in the seat**
Position the dummy in the seat such that the midsagittal plane is coincident with the longitudinal centerline markings on the seat cushion, seat back and head restraint. Place the dummy in the seat with the legs at an angle of 120° to the thighs. The calves should not be touching the seat cushion.

VH 4. Hold down the dummy's thighs and push rearward on the upper torso to maximize the pelvic angle.

VH 5. Set the angle between the legs and the thighs to 120°.

VH 6. Set the transverse distance between the centers of the front of the knees at 160 to 170 mm. (6.3 to 6.7 inches). Center the knee separation with respect to the longitudinal centerline markings of the seat cushion

VH Record Knee Separation 165

VH 7. Push rearward on the dummy's knees until the pelvis contacts the seat back, or the backs of the calves contact the seat cushion, whichever occurs first.

Pelvis contacted seat back.

VH Calves contacted seat cushion.

VH 8. Gently rock the upper torso ± 5° arc (approximately 51 mm (2 inches)) side-to-side three times.

VH 9. If needed, extend the legs until the feet do not contact the floor pan. The thighs should be resting on the seat cushion.

VH 10. With the feet perpendicular to the legs, place the heels on the floor pan. If a heel will not contact the floor pan, place it as close to the floor pan as possible.

VH 11. For vehicles without adjustable seat backs, adjust the lower neck bracket to level the head as much as possible. For vehicles with adjustable seat backs, while holding the thighs in place, rotate the seat back forward until the transverse instrumentation platform of the head is level to within ± 0.5°, making sure that the pelvis does not interfere with the seat bight.

4 Notches

N/A 12. If it is not possible to orient the head level within ± 0.5° minimize the angle.

VH 13. Measure and set the dummy's pelvic angle using the pelvic angle gauge. The angle is set to 20.0 °± 2.5°. If this is not possible, adjust the pelvic angle as close to 20.0 ° as possible while keeping the transverse instrumentation platform of the head as level as possible. 20.4°

14. Passenger foot positioning

VH 14.1 Place the passenger's feet flat on the floor pan.

N/A 14.2 If the either foot does not contact the floor pan, place the foot parallel to the floor and place the leg as perpendicular to the thigh as possible.

VH 15. **Passenger arm/hand positioning**
Place the rear dummy's upper arm such that the angle between the projection of the arm centerline on the midsagittal plane of the dummy and the thoracic spine centerline is 45°± 5°.

VH 16. **Seatbelt Placement**
Place the seatbelt around the test dummy and fasten latch.

VH Belt in cabling / umbilicals

Head C.G. to Stretcher

X = 32 mm

Z = 310 mm

Positioning ES-2re Male in Driver Position

Performed by:	VH	Date:	11/22

Initial:

VH 7. **Place the test dummy in the seat**

VH 7.1 Move the seat and seat back rearward as necessary to get the test dummy in the seat.

VH 7.2 Position the test dummy in the seat such that its plane of symmetry (i.e., mid-sagittal plane) is coincident with the longitudinal centerline marking on the seat cushion, seat back and head restraint.

VH 7.3 Bend the upper torso forward and then lay it back against the seat back. Push the shoulders of the dummy fully rearward.

VH 7.4 Remove the foam blocks from the pelvis flesh.

VH 7.5 Position the dummy so that it sits square and level in the seat.

VH 7.6 Repeat steps 1 thru 1.3 within "1st Row Seat Positioning – Setting Seats" to set the seat at the mid-fore aft position

VH 7.7 Maneuver the dummy's pelvis until the M3 hole on its back plate is within a circle with a radius of 10 mm round the H-point location (x,z) determined by the H-point machine.

VH 7.8 Position the pelvis of the dummy such that a horizontal (lateral) line passing through the dummy's hip pivot center is perpendicular to the longitudinal center plane of the seat.

VH 7.9 Measure the angle using the tilt angle sensor installed in the test dummy. Verify that the line through the dummy's hip pivot center is horizontal with a maximum inclination of ± 2°.

VH 7.10 Is the pelvis tilt angle within spec. ± 2°?

VH Yes - Record the tilt angle and measure and record the X and Z location of the dummy's hip pivot center on the chart below;

Dummy hip pivot center location		
Tilt Angle	-0.8	°
X(fore/aft) of striker	118	(mm)
Z(above/below) striker	-254	(mm)

☐ No, go back to step 7.2 and repeat steps to re-adjust the position of the test dummy.

☐ Proper position cannot be achieved, contact COTR immediately.

VH 7.11.1 **Foot Placement - For test dummy placed in driver seating position**

VH 7.11.2 Without inducing pelvis or torso movement, place the right foot of the dummy on the un-pressed accelerator pedal with the heel resting as far forward as possible on the floor pan.

VH 7.11.3 Set the left foot perpendicular to the lower leg with the heel resting on the floor pan in the same lateral line as the right heel.

VH 7.11.4 If possible within these constraints, place the thighs of the dummy in contact with the seat cushion.

VH 7.12 **Arm Placement**

Place the dummy's upper arms such that the angle between the projection of the arm centerline on the mid-sagittal plane of the dummy and the torso reference line is 40°±5°.

VH 8. **Seatbelt Placement**

Place the seatbelt around the test dummy and fasten latch.

VH Belt in Cabling / umbilical's

VH Affix targets, labeled appropriately (if applicable) to the front door or side panel to denote the hip pivot center of the test driver and rear passenger dummy. Use a 100 mm (4 inch) diameter target and label with "HP".

Head to striker

x = 26

z = -445

Dummy Measurement:

Performed by:	QP	Date:	11/22

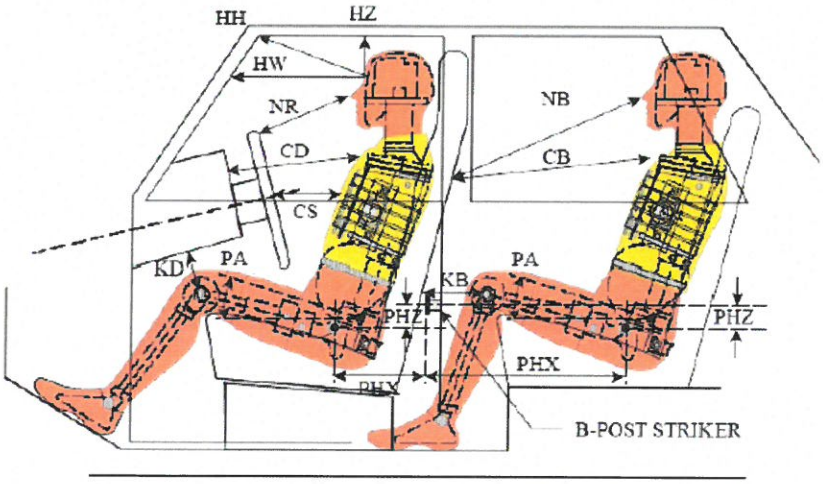
Initial:

VH Once the dummy is properly positioned, and the seat belt has been fastened over the dummy's chest, align a 150 mm (6-inch) segment of yellow/red checkerboard tape with the outboard edge of the shoulder belt portion of the seat belt such that it will be visible in Camera View No. 11.

VH Place a second 150 mm (6-inch) segment of yellow/red checkerboard tape on the dummy's chest such that it is aligned with the first segment that was placed along the outboard edge of the shoulder belt. The two checkerboard tape segments should be cut and positioned such that the colors for each square-inch section alternate on either side of the edge of the shoulder belt.

QP Record the final position of the dummy after it is seated in the test vehicle by taking the measurements indicated on the next page (accurate to ± 3 mm).

Tape Measure Unique Identifier:	—



NOTE: 2-DOOR VEHICLE SHOWN. REAR DUMMY PHX & PHZ MEASUREMENTS FOR A 4-DOOR VEHICLE WOULD USE THE C-POST STRIKER AS A REFERENCE POINT

LEFT SIDE VIEW

HH HEAD TO HEADER – Measure the distance from the point where the dummy's nose meets his forehead (between the eyes) to the furthest point forward on the header.

HW HEAD TO WINDSHIELD – Measure the distance from the point where the dummy's nose meets his forehead (between the eyes) to a point on the windshield directly in front of it. Use a level or plumb-bob.

HZ HEAD TO ROOF LINER – Measure the distance from the point where the dummy's nose meets his forehead (between the eyes) to the point on the roof directly above it. Use a level or plumb-bob.

NR NOSE TO RIM – Measure the distance from the tip of the dummy's nose to the closest point on the top of the steering wheel rim.

CD CHEST TO DASHBOARD – Place a tape measure on the tip of the dummy's chin and rotate 125 mm of it downward toward the dummy to the point of contact on the transverse center of the dummy's chest. Mark this point with a 25 mm (1 inch) diameter target. Measure the distance from this point to the closest point on the dashboard either between the upper part of the steering wheel between the hub and the rim, or measure to the dashboard placing the tape measure above the rim, whichever is a shorter measurement.

CS CHEST TO STEERING WHEEL – Measure the distance from the center of the steering wheel hub to the dummy's chest. Use a level. Mark this location on the dummy's chest with a 25 mm (1 inch) diameter target.

KDL/KDR LEFT AND RIGHT KNEES TO DASHBOARD – Measure the distance from the center of the knee pivot bolt's outer surface to the closest point forward acquired by swinging the tape measure in continually larger arcs until it contacts the dashboard.

KDAL/KDAR KNEE TO DASHBOARD ANGLE – Using the line representing the length measurement of the knee to the dashboard above, measure the angle between that line and the horizontal.

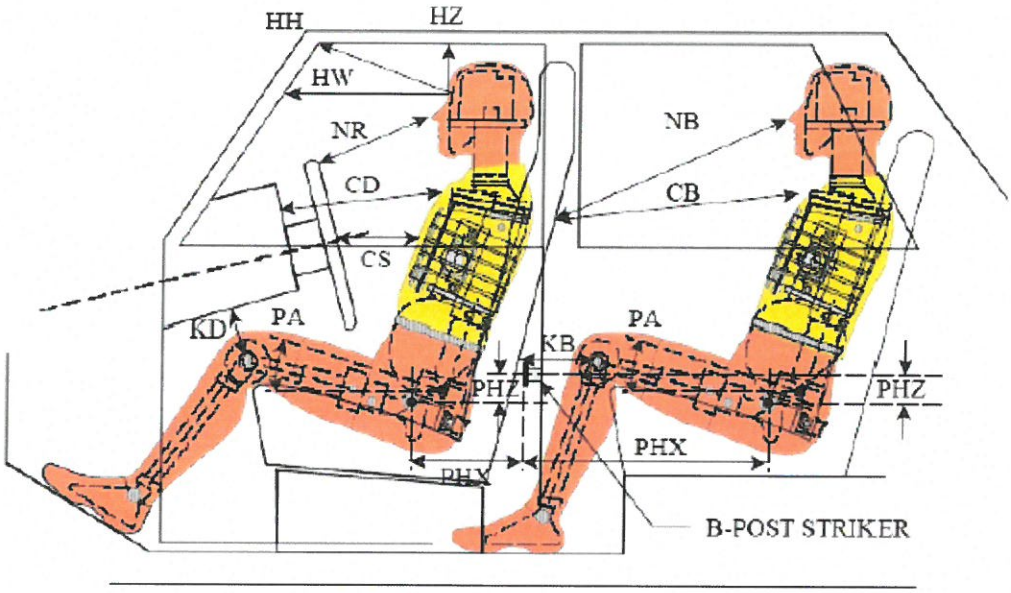
PAX PELVIC TILT ANGLE (X) – Measure by inserting the pelvic angle gauge into the Hip Point gauging hole (actual pivot center of the dummy's torso and thighs) on the dummy and taking this angle with respect to the horizontal. Alternatively, record the pelvic tilt angle X measured by tilt sensors installed in the test dummy.

PAY PELVIC TILT ANGLE (Y) – Measure by inserting the pelvic angle gauge into the Hip Point gauging hole (actual pivot center of the dummy's torso and thighs) on the dummy and taking this angle with respect to the vertical. Alternatively, record the pelvic tilt angle Y measured by tilt sensors installed in the test dummy.

PHX HIP POINT TO STRIKER (X) – Locate a point on the front door striker and project this point (with a level) vertically downward. Measure the distance horizontally from the pivot center of the dummy's torso and thigh to the point it intersects with the level.

PHZ HIP POINT TO STRIKER (Z) – Locate a point on the front door striker and project this point (preferably, with a level) horizontally toward the pivot center of the dummy's torso and thigh. Measure the distance vertically from the pivot center of the dummy's torso and thigh to the point it intersects with the level.

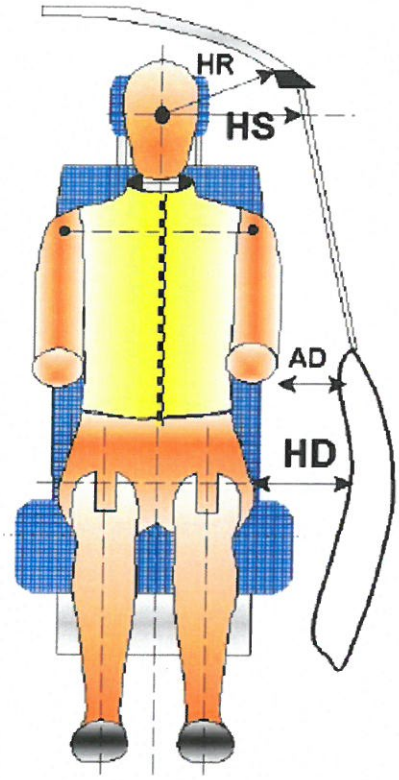
Note: The B-pillar striker will be used as the reference point for PHX & PHZ measurements.



NOTE: 2-DOOR VEHICLE SHOWN. REAR DUMMY PHX & PHZ MEASUREMENTS FOR A 4-DOOR VEHICLE WOULD USE THE C-POST STRIKER AS A REFERENCE POINT

LEFT SIDE VIEW

Code	Measurement Description	ATD Driver Unique Identifier: D034		ATD Passenger Unique Identifier: 261	
		Length (mm)	Angle (°)	Length (mm)	Angle (°)
HH	Header to Header	410			
HW	Head to Windshield	598			
HZ	Head to Roof Liner	169		249	
NR	Nose to Rim	413		483	
CD	Chest to Dashboard	580		504	
CS	Chest to Steering Wheel	370			
KDL/KDAL°	Left Knee to Dash	243	36.4°	232	16.5°
KDR/KDAR°	Right Knee to Dash	249	31.5°	212	15.5°
PAX°	Pelvic Tilt Angle (X-axis)		0.8°		0.1°
PAY°	Pelvic Tilt Angle (Y-Axis)				20.4°
PHX	Hip Point to Striker (X-Axis)	118		171	
PHZ	Hip Point to Striker (Z-axis)	-254		266	



Code	Measurement Location	Units	Driver	Rear Passenger
HR	Head to Side Header	mm	207	215
HS	Head to Side Window	mm	330	350
AD	Arm to Door	mm	100	139
HD	Hip Point to Door	mm	165	180

HR HEAD TO SIDE HEADER – Measure the shortest distance from the point where the dummy's nose meets his forehead (between the eyes) to the side edge of the header just above the window frame, directly adjacent to the dummy.

HS HEAD TO SIDE WINDOW – Measure the distance horizontally from the point where the dummy's nose meets his forehead (between the eyes) to the outside of the side window. In order to take this measurement, roll the window down to the exact height that allows a level measurement. Use a level.

AD ARM TO DOOR – Measure the distance from the center of the bottom of the outboard arm segment where it meets the driver or passenger dummy's torso to the closest point on the door.

HD HIP POINT TO DOOR – Project a point horizontally from the pivot center of the dummy's torso and thigh, outward to the edge of the pelvis plug. Measure the distance horizontally from this point to the closest point on the door panel. Use a level.

Inch Tape, Cables & Chalking:

Performed by:	QP & VH & TE	Date:	11/22

Initial:

VH Check cable routing. Take precaution to ensure that cable bundle is routed over the front seat armrest/console such that it allows sufficient slack and does not preclude or restrict dummy movement during impact. Duct tape may be used to secure the cable bundle to the front seat armrest/console to prevent cable damage, and to permanently set the necessary amount of slack.

VH Belt in cabling / umbilical's.

TE Zip tie down cabling in trunk.

VH Place inch tape on the dummy chest and shoulder belt in order to show the belt pretensioner deploy during the impact event.

QP Chalk ATD(s)

Parts of the anthropomorphic testing devices shall be coated with colored chalk/water solutions to show contact points with the vehicle's interior, with their own components (such as head to knee contact), and with each other. The chalk/water solution shall be applied after final dummy positioning.

Note: Face chalk should extend below the chin.

Dummy Part	Driver
Face (Do not paint sides)	Blue
Top of Head (Stop painting at skull cap)	Yellow
Outer Side of Head	Green
Back of Head (skull cap)	Red
Outer Shoulder	Orange
Outer Hip	Red

Dummy Part	Color
Face	
Top of Head	
Side of Head	
Back of Head	
Shoulder	
Hip	

Attitude - As Tested Condition:

Performed by:	QP	Date:	11/22

Initial:

QP With the vehicle in the "As Tested" weight condition, place it on a flat, level surface.

Note: If the vehicle has an Auto-Leveling, the ignition must be set to the "on" position. If the vehicle is equipped with a self-adjusting hydraulic system, contact the COTR for further guidance on attitude measurements.

QP Verify that the "As Tested" vehicle attitude measurements are equal to or between the "As Delivered" and "Fully Loaded" vehicle attitude measurements. If any "As Tested" attitude measurements do not meet this requirement, adjust the load by shifting ballast, instrumentation, and/or cameras. If, after repeating these steps, any of the "As Tested" attitude measurements do not meet the requirement, contact the Technical Director.

Note: The "As Tested" vehicle attitude measurements **shall be taken within an hour of impact** to ensure the proper attitude is met.

Test Vehicle Attitudes and CG		Units	Fully Loaded	As Tested	Meets Requirements *** Yes	No
Left Front	694	mm	684	686	Yes	
Right Front	694	mm	693	693	Yes	
Right Rear	707	mm	682	682	Yes	
Left Rear	703	mm	672	676	Yes	
Vehicle CG (Aft of Front Axle)		mm	1113			
Vehicle CG (Left(+)/Right(-) from Longitudinal Centerline)		mm	18			

*** The "As Tested" vehicle attitude measurements must be equal to or within +/- 10 mm of the "Fully Loaded" vehicle attitude measurements at each wheel well.

Pre-Test Photos:

Performed by:	VH	Date:	11/22/22

Note: Clear and properly focused digital still photographs in .jpg format with a minimum dots-per-inch (DPI) of 180 shall be taken. A vehicle information placard placed parallel with the camera, identifying the test vehicle model as well as the barrier and NHTSA number, along with an indication of whether the photo was taken pre-test shall appear in each photograph and be legible. All photographs must be in landscape view / orientation. Glare or light from any illuminated or reflective surface shall be minimized while taking photographs. Reference sample photo set!

Initial:	Photos With Driver Positioned in Vehicle
VH	No. 17 – Pretest Front SID in Final Seating Position (Door Open)
VH	No. 18 – Pretest Front SID in Final Seating Position (Door Closed)
VH	No. 19 – Pretest Front SID – Opposite Side View
VH	No. *21 – Pretest Rear SID in Final Seating Position (Door Open)
VH	No. 22. – Pretest Rear SID in Final Seating Position (Door Closed)
VH	No. 23. – Pretest Rear SID – Opposite Side View

* - Applies to vehicles with 4 or more side doors

Pre-Test Video:

Performed by:	TB	Date:	11/22

A real-time camera (24-30 fps) shall be used to document the pre-test and post-test condition of the test vehicle in addition to the pre-test and post-test positions of the test dummies, including, but not limited to, the placement of the lap and shoulder belts. Particular attention must be exercised to fully document the proper closing of all vehicle doors, including any rear hatchback or tailgate.

Review Post-Test Assignments with Staff:

Performed by:	VH	Date:	11/22/22

Initial:

VH Review with the Staff their post-impact order of events and assignments.

While the Test Engineer is taking post-test photos, the following personnel need to be completing the following tasks. During this time, please make sure customers are staying in the observation room and that each one of you stay clear in order not to be photographed. Furthermore, no instrumentation or equipment shall be removed from the test vehicle at this time. Assignments are as follows:

- Camera Personnel – Need to be downloading high speed video and verifying that acceptable video was captured by all cameras.
- Data Personnel – Need to download all instrumentation data and identify questionable and lost channels.
- Facility Personnel – Need to have equipment in hand to capture any Stoddard leaks.

Once the Test Engineer has informed the Staff that post-test photos have been taken. Assignments are as follows:

- Camera Personnel – Check and document any type of equipment damage. If video was lost or is of poor quality, inspect equipment and identify root cause. Please document all findings.
- Data Personnel – For any questionable and lost channels, inspect cabling and instrumentation to identify root cause. Please document findings.
- Facility Personnel – Clean up impact area.

Verify Vehicle & Set-Up / Go / No-Go:

Performed by:	QP	Date:	11/22

Initial:

QP Review workbook for completeness

QP Remove head level from ATD

QP Verify plumb bobs have been removed from vehicle

QP Verify Non-struck side airbags have been disabled

N/A Seat Belt Guides – Usage of seat belt guides should be in accords with instructions included in the vehicle owner's manual or in Form No. 1.

QP Adjustable Armrests – Place any adjustable armrest in the retracted position.

N/A Accelerator Pedal – If the vehicle has an adjustable accelerator pedal, adjust it to the full forward position.

QP Doors – Place all doors (including a hatchback or tailgate) in the fully closed and latched position. Check instrument panel telltales just prior to the test to ensure that all doors and hatches are closed. ***In all instances, all side doors should be unlocked pre-test.***

QP Door Locks – Verify that the locks on *all side doors* are unlocked.

VH Floor Mats - If the vehicle is equipped with optional all-weather (rubber) floor mats, remove them from prior to test. If the vehicle is equipped with carpeted floor mats, or if all-weather floor mats are standard equipment, place them in their proper locations prior to test.

QP Windows - Verify that the driver and passenger front windows are in the fully closed position. Verify that all other windows and vents in the fully closed position unless otherwise specified by the COTR.

QP Transmission Engagement:
1. Manual Transmission – Place manual transmissions in neutral.
2. Automatic Transmission – Place automatic transmissions in neutral.

QP Parking Brake Engagement – Engage the parking brake.

QP Verify speed traps are reset. (Primary and Secondary)

QP Confirm fuel collectors are ready at the barrier.

QP Escort customer to Observation Room – explain to them that they need to stay in the Observation Room until the Test Engineer comes to get them (at minimum, until after the post-test photos have been taken).

QP Verify tow skate attached to tow hooks (visual inspection).

QP Disconnect battery charger. Verify vehicle battery power is sufficient without charger on (wait 1 minute then should have at least 12.75 volts and stable).

QP Turn real time cameras on.

JB Verify cameras are Armed and ready.

QP Ignition Switch –
Place the key in the ignition and switch it to the "ON" position and have SRS light observed by visitor. Check to ensure that the "Airbag Readiness Indicator" shows the airbag system as being functional. If it is a PUSH start vehicle, test must be conducted in 5 min from "Key on".

N/A If there is any delay over 5 minutes, verify SRS light is still OK.

TE Verify tow operator has completed their checklist.

AK Verify impact speed.

Initial:

V Trigger Check

V Abort Check.

V Speed Trap Check

V Verify Speed Trap Location

V Safety Check

V Reviewed all sections of this binder for completeness.

V Facility Ready for Test

X	**READY** for test	Date:	11/22
○	**NOT READY** to be tested		

○	Corrections made now **READY** for test	Date:	
○	**NOT READY** for test		

OEM Inspection of Set-up:

Performed by:	QP	Date:	11/22

Initial:

QP Setup real time cameras on both sides of vehicle [Lens must be pointed toward ATD].

QP Turn on cameras and start recording.

QP Get OEM and notify them that they have 35 minutes to inspect dummy positioning.

QP Escort OEM to conference room immediately after dummy positioning inspection.

Tow System & DAS Checklist:

Tow Engineer's Name:	Alex	Today's Date:	11/22/22

Trap Location (from barrier) Forthest mm

Speed Trap Unique Identifier: 400969

Impact Location:

Performed by: [illegible] Date: 11/22

Initial:
[illegible] With the vehicle in the "As Tested" weight condition, place it on a flat, level surface.

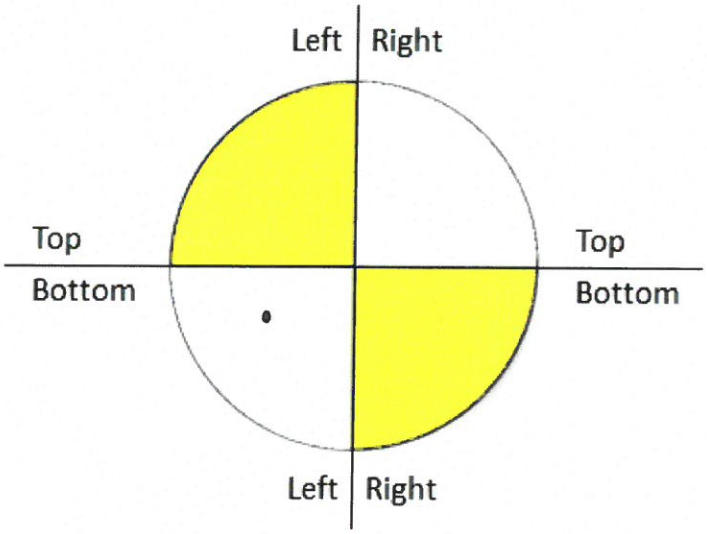
Impact Location:

~~1498~~ 359 mm Actual impact point (aft of front axle)

15 mm to Right / ~~Left~~ (Circle One) – must be within ± 50 mm (+ Forward / - Rearward)

- 8 mm Up / Down (Circle One) – must be within ± 20 mm (+ Up / - Down)

Looking at the impacted target, draw / indicate the location of the impact on this illustration:



+/- 50 mm Horizontal ("+" = Forward, "–" = Rearward)
+/- 20 mm Vertical ("+" = Down, "–" = Up)

Post-Test Observations – Vehicle As Is

Performed by: QR Date: 11/22

Instructions: Please completely fill in the below tables. If unsure, take additional photographs and please include any observations. Be as descriptive as possible.

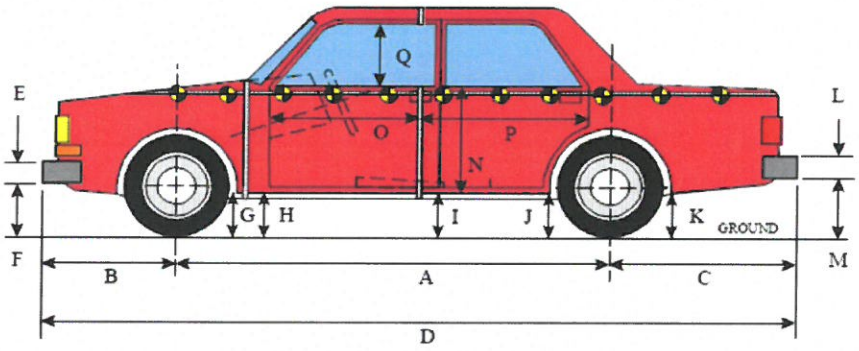
Dummy Contact Location	Driver	Rear Passenger
Face Contact	Curtain Airbag	none
Top of Head Contact	Curtain Airbag & roof liner	Curtain Airbag roof liner rear middle Head rest
Left Side of Head Contact	Curtain Airbag	Curtain Airbag
Back of Head Contact	Head rest & Curtain Airbag	Curtain Airbag & roof liner & rear middle Head rest
Left Shoulder Contact	Door trim	Seat Bolster & Pelvis/ torso Airbag
Upper Torso Contact	Pelvis & torso Airbag & Seat bolster	Pelvis & torso Airbag
Lower Torso Contact	Pelvis & torso Airbag & seat bolster	Pelvis & torso Airbag
Left Knee Contact	Door trim	Door trim
Left Hip Contact	Pelvis & torso Airbag	Seat Pan bolster

Supplemental Restraint System	Struck Side Driver		Non-Struck Side Rear Passenger	
	Mounted	Deployed	Mounted	Deployed
Frontal airbag	Yes	NO		
Knee airbag	Yes	NO		
Side airbag 1 – Curtain Airbag	yes	Yes	Yes	Yes
Side airbag 2 – Torso Airbag	No	N/A	NO	N/A
Side airbag 3 – Torso / Pelvis Airbag	Yes	Yes	Yes	Yes
Seat belt pretensioner	Yes	Yes	Yes	Yes
Seat belt load limiter	Yes	Yes	Yes	Yes
Other – Seat Cushion Airbag	N/A	NO	N/A	NO

Post-Test Hand Measurements

Performed by:	QP	Date:	11/22

Note: All measurements must be taken in the As Tested Condition (Fully loaded with instrumentation & ATD)



Initial:

VH	Hand measure	E	Front Bumper Thickness - *(The vertical height of the front bumper fascia)*	138 mm
VH	Hand measure	F	Front Bumper Bottom to Ground - *(Vertical distance from ground to the bottom of the front bumper fascia)*	402 mm
VH	Hand measure	G	Sill Height at Front Wheel Well - *(Vertical distance from ground to the sill at the front wheel well opening)*	208 mm
VH	Hand measure	H	Sill Height at Front Door Leading Edge -*(Vertical distance from ground to the sill at the front door seam)*	216 mm
VH	Hand measure	I	Sill Height at B-Pillar - *(Vertical distance from ground to the sill in line with the front door striker or B-pillar if no striker exists)*	210 mm
VH	Hand measure	J1	Sill Height at Rear Wheel Well - *(Vertical distance from ground to the sill at the rear wheel well opening)*	221 mm
VH	Hand measure	J2	Pinch Weld Height at Rear Wheel Well - *(Vertical distance from ground to the pinch weld at the rear wheel well opening)*	192 mm
VH	Hand measure	K	Sill Height Aft of Rear Wheel Well - *(Vertical distance from ground to the vehicle sheet body at the rear of the rear tire's wheel well)*	235 mm
VH	Hand measure	L	Thickness or height of rear bumper at center.	191 mm
VH	Hand measure	M	Distance from bottom of bumper to ground at center.	398 mm
Tape Measure Unique Identifier Used to conduct measurements				-

Post-Test Photos – Vehicle As Is:

Performed by:	JH	Date:	1/22

Note: Clear and properly focused digital still photographs in .jpg format with a minimum dots-per-inch (DPI) of 180 shall be taken. A vehicle information placard placed parallel with the camera, identifying the test vehicle model as well as the MDB and NHTSA number, along with an indication of whether the photo was taken post-test shall appear in each photograph and be legible. All photographs must be in landscape view / orientation. Glare or light from any illuminated or reflective surface shall be minimized while taking photographs.

Initial: Vehicle

- No. 2 – Post test Frontal View of Test Vehicle
- No. 6 – Post test Impacted Side View of Test Vehicle
- No. 4 – Post test Rear View of Test Vehicle
- No. 16 – Post test Overhead View of the MDB and Test Vehicle
- No. 25 – Post-Test T(0) – Impact Event
- No. 26 – Post test Close-up View of Impact Point Target

Initial: Photos of MDB

- No. 8 – Post test Frontal View of Impactor Face
- No. 14 – Post test Top View of Impactor Face
- No. 10 – Post test Left Side View of Impactor Face
- No. 12 – Post test Right Side View of Impactor Face

Initial: With Dummy's Positioned in Vehicle

- No. 20 – Post test Front SID – Opposite Side View
- No. 24 – Post test Rear SID – Opposite Side View

Post-Test Video:

Performed by:	TB	Date:	11/22

A real-time camera (24-30 fps) shall be used to document the pre-test and post-test condition of the test vehicle in addition to the pre-test and post-test positions of the test dummies, including, but not limited to, the placement of the lap and shoulder belts. Particular attention must be exercised to fully document the proper closing of all vehicle doors, including any rear hatchback or tailgate.

Initial: MDB

- TB View of MDB and vehicle – front of vehicle
- TB View of MDB and vehicle – rear of vehicle
- TB View of MDB and vehicle – ¼ front
- TB View of MDB and vehicle – ¼ rear
- TB View of MDB and vehicle – parallel to impact door

Initial: Vehicle

- TB View of impact point – close-up
- TB View of impacted side (vehicle removed)
- TB View of front of car
- TB View of rear of car
- TB View of inside front door (dummy removed)
- TB View of inside rear door (dummy removed)
- N/A Any other vehicle anomalies if applicable

Initial: Test Dummies

- TB View of front ES-2re – parallel to impact door
- TB View of rear SID-IIs – parallel to impact door
- TB View of front ES-2re – thru opposite window
- TB View of rear SID-IIs – thru opposite window

Post-Test Photos:

Performed by:	JH	Date:	11/22

Note: Clear and properly focused digital still photographs in .jpg format with a minimum dots-per-inch (DPI) of 180 shall be taken. A vehicle information placard placed parallel with the camera, identifying the test vehicle model as well as the barrier and NHTSA number, along with an indication of whether the photo was taken pre-test shall appear in each photograph and be legible. All photographs must be in landscape view / orientation. Glare or light from any illuminated or reflective surface shall be minimized while taking photographs. Reference sample photo set!

Initial: **Photos With Dummy's Not in Vehicle**

JH No. 28 – Post test Front Seat Occupant Area showing head and torso contact regions (Test dummy removed)

JH No. 29 – Post test Rear Seat Occupant Area showing head and torso contact regions (Test dummy removed)

Post-Test Observations – Doors Open:

Performed by:	QP	Date:	11/27

Instructions: Please completely fill in the below tables. If unsure, take additional photographs and please include any observations and be descriptive as possible.

Doors

For each door, note whether: the door remained closed and operational, whether the door totally separated from the vehicle at the hinges or latches, the door disengaged from the latched position, the latch separated from the striker, the hinge components separated from each other, the latch or hinge systems pulled out of their anchorages, or the door was jammed shut. All applicable conditions should be noted. Video analysis should also be used to verify whether any door, including the rear hatch, opened during the impact event.

Initial:

QP Inspect the door at the striker, if the door is open at the striker post, take measurements of the door opening at the location and record it in the space provided below.

QP If there is a failure with any door, door component, or door opening, notify the Data Processing Engineer to include such information on the Quick Look Report.

Instructions: For the next two tables, indicate "Yes", "No" or "N/A"

Post Test Door Performance	Struck Side		Non-Struck Side		Rear Hatch / Other Door
	Front	Rear	Front	Rear	
Remained closed and operational	No	No	Yes	Yes	No
Total separation from vehicle at hinges or latches	No	No	No	No	No
Latch or hinge systems pulled out of their anchorages	No	No	No	No	No
Latch separated from striker	No	No	No	No	No
Jammed shut	Yes	Yes	No	No	No
If door opened at striker, record width of opening at striker (mm)	0	0	0	0	0

Seat Movement and Structural Observations

In the space provided below, note any seat or seat back movement or disengagement. Also, note any structural observations pertaining to the pillars, sill, window, and windshield. In particular, describe the amount of deformation to the struck-side pillars and struck side sill. Note whether there was damage to the front windshield area and if so, where the damage occurred. A similar assessment should be made for the side windows. Any other notable effects from the impact should also be indicated.

Instructions: For the next two tables, indicate "Yes", "No" or "N/A"

Post Test Seat Performance	Struck Side		Non-Struck Side	
	Front	Rear	Front	Rear
Seat movement along seat track	NO	NO	No	NO
Seat disengagement from floor pan	NO	NO	NO	NO
Seat back movement from initial position	NO	NO	NO	NO
Seat back collapse	No	No	NO	NO

Post Test Structural Observations	Observations and Conclusions
Pillar performance	B-Pillar Buckeled
Sill separation	none
Windshield damage	None
Side window damage	Shattered & fell out
Other notable effects	Trunk opened upon impact

Post-Test Data Checklist:

Performed by:	QR	Date:	11/22

Initial:

QR Confirm video has been downloaded.

QR Confirm data has been downloaded.

QR Download ATD / vehicle temperature data.

VW Read and review Questionable Data Channel list.

N/A Remind staff not to remove equipment from vehicle until questionable channel list / questionable channels have been inspected.

N/A Inspect questionable instrumentation/cabling before removal from vehicle, take photos, and document damage.

N/A Tag damaged equipment and remove from service.

QR Authorize equipment to be removed.

Critical Results:

Performed by:	QP	Date:	11/22

The following deliverables were met:

QP Impact speed within 52.9 km/h ± 0.8 km/h (32.9 mph ± 0.5 mph).

QP Impact angle within 27° ± 1°

QP Impact point within ± 50 mm (Horizontal offset from the vertical impact line)

Driver ATD (ES-2re) Dumm Injury Data:

NA Head – Head Injury Criterion (HIC) (36) may not exceed 1000.

NA Maximum Thoracic Rib Deflection – The sum of thoracic rib deflection may not exceed 44 mm.

NA Total Abdominal Force – The sum of abdominal forces may not exceed 2,500 N (562 lbf.).

NA Pubic Symphysis Force – The sum of pubic symphysis forces may not exceed 6,000 N (1349 lbf.).

N/A Notify customer if injury criteria limit is exceeded.

(Reference Table)

ES-2re Injury Criteria	Max. Allowable IARV
	Units
HIC	1000
Upper Rib Deflection (mm)	44 mm
Mid. Rib Deflection (mm)	
Lower Rib Deflection (mm)	
Abdominal Load (front) (N)	
Abdominal Load (mid) (N)	
Abdominal Load (rear) (N)	
Sum of Abdominal Forces (N)	2.5 kN
Pubic Symphysis (N)	6 kN

Passenger ATD (SID-IIs) Dummy Injury Data:

VH Head – Head Injury Criterion (HIC) (36) may not exceed 1000.

VH Lower Spine – The resultant spine acceleration may not exceed 82 g.

VH Pelvis – The sum of the acetabular and iliac pelvic forces may not exceed 5,525 N (1,242 lbf.).

☐ Notify customer if injury criteria limit is exceeded.

(Reference Table)

SIDIIs Injury Criteria	Max. Allowable IARV
HIC	1000
Max. Spine Acceleration (g)	82
Acetabular (N)	
Iliac (N)	
Sum of Acetabular and Iliac (N)	5525

* *Proposed IARV*

Door Opening Criteria:

VH Any side door that is struck by the mdb shall not separate totally from the vehicle.

VH Any door (including a rear hatchback or tailgate) that is not struck by the MDB must meet the following requirements:

- The door shall not disengage from the latched position.
- The latch shall not separate from the striker, and the hinge components shall not separate from each other or from their attachment to the vehicle.
- Neither the latch nor the hinge systems of the door shall pull out of their anchorages.

Notify Customer – Test Executed:

Performed by:	QP	Date:	11/22
